^(!) Not all establishments were able to furnish information regarding sales by commodities. This table shows, for each of the nuter kind-business classifications, the amount and percentage of the total net sales that have been broken down by commodities.

The table shows have a sales and the sales have been broken down by commodities.

The table should be sales that have been broken down by commodities. For this proceeding the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allowances.

(!) Les établissements n'ent pas tous été capables de fournir des informations sur les ventes recoupées en marchandises. Cotablesu montre pour chaque classification majoure par genre de commorne le montant et le pour-cert de toutes les ventes nettes qui ent été recoupées en marchandises. Le recoupement des ventes en marchandises et dans quelques cas hasé sur le chiffre brut au lieu du chiffre not des ventes. Pour cette raison les ventes de marchandises peuvent dans certain cas dépasser le total des ventes nettes par la valeur des marchandises ou des allocations.

Table 35.—MARITIME PROVINCES—Commodity Sales, by Kinds of Business and Types of Establishments

Chain store warehouses		
Chain store warehouses Tobacco and tobacco products (except lcaf) trad	.e) 116	Commerce des tabacs et produits du tabac (à l clusion du tabac en feuilles).

⁽¹⁾ For each commodity the sales reported are shown by trades and by types of establishments operating in each trade. A full explanation of the terms used is given in the introduction to this report.

⁽²⁾ Slight differences may be found in some cases between the figures given for total sales of a commodity and the sum of the sales figures by trades or types of establishments due to the figures being shown to the nearest thousand.

⁽x) Less than \$1.000.

⁽¹) Dans chaque marchandise, les ventes déclarées sont divisées par genre de commerce et type d'établissement dans chaque commerce. Une explication complète des termes paraît dans l'introduction de ce rapport.

^(*) Dans certains cas il y a de légères différences entre lo chiffre des ventes globales d'un article et la somme des ventes par commerce ou type d'établissement, parce que les chiffres ne sont donnés qu'à un millier près.

⁽x) Moins de \$1,000.

⁽¹⁾ Not all establishments were able to furnish information regarding sales by commodities. This table shows, for each of the major kind-of-business classifications, the amount and percentage of the total net sales that have been broken down by commodities. The breakdown of sales by commodities was in some cases reported on the busis of gross sales rather than net sales. For this roason the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allowances.

⁽¹) Les établissements n'ont pas tous été capables de fournir des informations sur les ventes recoupées en marchandises. Ce tableau montre pour chaque classification majeure par genre de commerce le montant et le pour-cent de toutes les ventes entets qui ont été recoupées en marchandises. Le recoupement des ventes en marchandises at dans quelques cas basé sur le chiffre brut au lieu du chiffre net des ventes. Pour cette raison les ventes de marchandises peuvent dans certains cas dépasser le total des ventes nettes par la valeur des marchandises retournées ou des allocations.

Table 25.—QUEBEC—Commodity Sales, by Kinds of Business and Types of Establishments (Sales are shown in thousands of dollars)

⁽¹⁾ Les pourcentages de cette colonne sont basés sur les réponses des maisons qui ont spécifié si elles vendaient au comptant ou à crédit.
(2) Les chiffres de cette colonne sont basés sur les réponses des maisons qui ont déclaré ce genre de ventes. Il se peut qu'ils ne représentent pas les ventes totales aux consommateurs industriels, vu que cortaines maisons n'ont pas noté ces transactions.

⁽¹⁾ Les pourcentages de cette colonne sont basés sur les réponses des maisons qui ont spécifié si elles vendaient au comptant ou à crédit.

(2) Les ch. fires de cette colonne sont basés sur les réponses des maisons qui ont déclaré ce geare de ventes. Il se peut qu'ils ne représentent pas les ventes totales aux consommateurs industriels, vu que certaines maisons n'ont pas noté ces transactions.

⁽¹⁾ All establishments did not report full particulars of operating expenses. This table includes only those establishments which gave total operating expenses. The operating expenses shown in this table should be considered representative only when the sales of establishments reporting total expenses form a high proportion of the total sales of all establishments in the same classification.

⁽¹⁾ Tous les établissements n'ont pas fourni des détails complets de leurs dépenses courantes. Ce tableau ne comprend que les établissements qui les ont fournis au complet. Les dépenses courantes de ce tableau doivent être considérées comme représentatives seulement lorsque les ventes des établissements déclarant leurs dépenses totales forment une haute propor tion des ventes totales de tous les établissements dans la même classification.

⁽¹⁾ Not all ostablishments were able to furnish information regarding sales by commodities. This table shows, for each of the major kind-of-business classifications, the amount and percentage of the total net sales that have been broken down by commodities. The breakdown of sales by commodities was in some cases reported on the basis of gross sales rather than net sales. For this reason the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allewances.

⁽¹⁾ Les établissements n'ont pas tous été capables de fournir des informatiens sur les ventes recoupées en marchandises. Ce tableau montre pour chaque classification majeure par genre de commerce le montant et le pour-cent de toutes les ventes nettes qui ont été recoupées en marchandises. Le recoupement des ventes en marchandises est dans quelques cas basé sur le chiffre brut au lieu du chiffre net des ventes. Pour cette raison les ventes de marchandises peuvent dans certains cas dépasser le total des ventes nettes par la valeur des marchandises retournées ou des allocations.

Table 28.—ONTARIO—Commodity Sales, by Kinds of Business and Types of Establishments

⁽¹⁾ Les pourcentages de cette colonne sont basés sur les réponses des maisons qui ont spécifié si elles vendaient au comptant ou à crédit.
(2) Les chiffres de cette colonne sont basés sur les réponses des maisons qui ont déclaré ce genre de ventes. Il se peut qu'ils ne représentent pas les ventes totales aux consommateurs industriels, vu que certaines maisons n'ont pas noté cos transactions.

⁽¹⁾ The percentages in this column are based on the replies of those firms reporting whother they sold for cash or extended credit.
(2) The figures in this column are based on the replies of those firms reporting such sales. These may not represent the total sales to industrial consumers as some firms kept no records of such transactions.

Tableau 2B.—PROVINCES DES PRAIRIES—Résumé des malsons de gros, 1930, par principales classifications

Les pourcentages de cette colonne sont basés sur les réponses des maisons qui ont spécifié si elles vendaient au comptant ou à crédit.
 Les chiffres de cette colonne sont basés sur les réponses des maisons qui ont déclaré ce genre de ventes. Il se peut qu'ils ne représentent pas les ventes totales aux consommateurs industriels, vu que certaines maisons n'ont pas noté ces transactions.

⁽i) Not all establishments were able to furnish information regarding sales by commodities. This table shows, for each of the major kind-of-business classifications, the amount and percentage of the total net sales that have been broken down by commodities. The breakdown of sales by commodities was in some case reported on the basis of gross sales rather than net sales. For this reason the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allowances.

(i) Les établissements n'ont pas tous été capables de fournir des informations sur les ventes recomées en marchandisess. Co tableau montre pour chaque classification majeure par geure de commerce le montant et le pour-cent de toutes les ventes nettes qui ont été recoupées en marchandises. Le recoupement des ventes en marchandises est dans quelques cas basé sur le chiffre but du lieu du chiffre net des ventes. Pour ectte raison les ventes de marchandises peuvent dans certains cas dépasser le total des ventes nettes par la valeur des marchandises retournées ou des allocations.

⁽¹⁾ All establishments did not report full particulars of operating expenses. This table includes only those establishments which gave total operating expenses. The operating expenses shown in this table should be considered representative only when the sales of establishments reporting total expenses form a high proportion of the total sales of all establishments in the same classification.

(1) Tous les établissements n'ont pes fourni des détails complets de leurs dépenses courantes. Ce tableau no comprend que les établissements qui les ont fournis au complet. Les dépenses courantes de ce tableau doivent être considérées comme représentatives soulement lorsque les ventes des établissements déclarant leurs dépenses totales forment une haute proportion des ventes totales de tous les établissements dans la même classification.

⁽⁴⁾ Not all establishments were able to furnish information regarding sales by commodifies. This table shows, for each of the major kind-of-business classifications, the amount and percentage of the total net sales that have been broken down by commodifier. This breakdown of takes by commodifies was in some cases reported on the basis of gross sales rather than net sales. For this retson the commodity sales may in some instances exceed the total net sales by the amount of returned goods and allowances.

(4) Le. étables cannot not pass tous été capables de fournir des informations sur les ventes recoupées en marchandises. Ce tableau montre pour chaque classification majouro par gene de commerce le montant et le pour-cent de toutes les ventes nettes qui ont été recoupées en marchandises. Le recoupement des ventes en marchandises est dans quelques cas basé sur le chilfre brut un lieu du chilfre net des ventes. Pour cette reison les ventes de marchandises peuvent dans certains cas dépasser le total des ventes nettes par la valeur des marchandises retournées ou des allocations.

INTRODUCTION

While the chain store type of operation is not new, rapid expansion of chains in the retail field took place in Canada during the ten years preceding the taking of the Census of Merchandising and Service Establishments in 1931. The results of that Census provide the first authoritative information relating to the amount of business transacted by chains and to the proportion that this business bears to the total retail trade.

Chains are not confined to the retail merchandising field. There are chains of banks, bond houses, newspapers, grain elevators, manufacturing plants, and of various other kinds of business enterprises in addition to the 523 retail merchandising and 63 service chains included in the Census of Merchandising and Service Establishments and whose activities during 1930 are summarized in this section of Volume XI of the Census of 1931.

A large amount of detail regarding the operations of these chains is to be found in the Dominion and Provincial reports on retail trade already published in printed form. In addition to furnishing chain store data for each province as a whole, the various provincial bulletins also show the number of chain stores and value of chain sales for each city of 30,000 population or more, firstly, for the total retail trade of the city as a whole and, secondly, for those lines of business in which chains are of considerable importance.

For the general retail reports, each unit of a chain store system was classified independently on the basis of the kind of business which it carried on. But some chains operate stores all of which cannot be classified identically as to kind of business. In particular, many food chain companies operate stores some of which are purely grocery units, while others sell both groceries and meats and are classified as combination stores. For the general retail reports each unit was classified as a combination store or as a grocery store, depending upon whether or not fresh meat was sold in addition to grocery items. For this report, however, it has been necessary to classify each chain as a whole upon the basis of its major activity.

If a comparison is made of the information on chains given in this section with that shown in the Dominion summary of retail trade for stores by types of operation, certain differences will be found. It is felt that some explanation of these differences should be made. On examination, it will be found that the amount of business credited to chain stores in this section is somewhat less than that shown in the Dominion summary of retail trade. These differences in sales values arise out of the methods which have been followed in preparing the two series of reports.

In a considerable number of cases, branches of chain stores were opened during the year 10:30, and, consequently, the operating statement furnished by the chain store companies for these particular units covered only that part of the year that the branches were under their direction. In many cases, chain stores purchased during the year independent going concerns, for which it was impossible to obtain a report covering the portion of the year prior to their inclusion in the chain. For this reason, it was believed that a more accurate picture would be given of the total amount of retail trade transacted in each locality for the year if the reported business of stores opening during the year was projected for twelve months' operations. In other words, the figures given for part-year business were multiplied by a factor which seemed most reasonable in each case to obtain a full year's operations. In so far as chain stores alone are concerned, this method tends slightly to exaggerate the actual sales of chain stores in 1930, but, on the other hand, the results give an indication of the amount of business which would have been handled by chain stores if every unit had operated for twelve months. They also give a more accurate picture of the total retail trade transacted whether by chain or independent stores.

The present report, however, is based on the consolidated mancial statements submitted by chain stores covering the entire operations during the year. An attempt is made in this report to show the actual business handled by chain store organizations during 1930 as distinguished from the purpose of the Provincial and Dominion summaries, in which the chief aim is to show the total amount of business transacted in each locality and in the country as a whole.

Chains Defined

For the Census of Merchandising and Service Establishments, chain systems have been taken to include organizations operating four stores and upwards. Firms operating two or three stores are classified as two- or three-store multiples, not as chains, and are reported under these headings in the Provincial and Dominion retail reports. In 1930 there were 4,857 units in the retail merchandise field belonging to these two- and three-store multiples and these had total sales during that year of \$219,866,700. These stores and sales are not included here.

Voluntary chains, in which the stores are individually owned and operated but are grouped for buying and/or advertising purposes, are not included with the chains analyzed here. According to the Census returns, there were 4,988 stores belonging to some thirty different organizations operating upon this basis in Canada during 1930 and these had total sales of \$126,547,600. Of the total number of voluntary chain units, 235 with sales of \$7,517,200 were also members of two- and three-store multiples and have been included in the figures already mentioned for this type.

Not all chain store companies operate a warehouse or warehouses from which the individual stores are stocked. For the Census of Merchandising and Service Establishments reports were secured from 79 different chain store warehouses and these had sales for 1930 of \$161,912,300. These have been treated as wholesale establishments and all data pertaining to them are included in the reports on wholesale trade but are omitted from the chain store figures given here.

While all chains do not operate distributing warehouses, some form of central buying is a feature of all chain store operations for without this feature the advantages to be gained from bulk purchasing would not be obtained. In a number of cases branches have grown up around a parent store from which the individual stores draw their stocks. Such organizations should more properly be classified as local branch systems rather than chains, but the information received regarding the method followed in supplying the different stores was usually inadequate to permit this classification being used. All retail organizations operating at least four stores carrying on the same or similar kinds of business are, therefore, classified as chains.

Scope of Report

The first part of this report presents a summary of all chams operating in both the retail merchandising and the retail services fields. For each of the kinds of business in which chains operate, information is given regarding the number of chain organizations, number of units, and total chain store sales. Due to the fact that some chains operate stores all of which cannot be classified alike as to kind of business, it is not possible in every case to show the percentage that chain sales form of the total business of all stores in the same classification. These percentages or ratios have been given for each kind-of-business group as a whole and also for some of the more specific kinds of business in which chains are of considerable importance. The chains are then classified according to type depending upon the extent of territory in which their branches are located. Tables are also given, indicating the geographical distribution of chains, showing the proportions of cash and credit business done by chains and indicating the growth of chains in Canada by classifying chain units according to date of present ownership.

Separate chain reports have already been published giving detailed analyses of the following kinds of chains: food chains, drug store chains, variety-store chains, and filling station chains. These reports have been brought together here, a separate section being given to each.

INTRODUCTION

Bien que l'exploitation des chaînes de magasins ne soit pas nouvelle, l'expansion rapide des chaînes dans le commerce de détail s'est faite au Canada durant les dix années qui ont précédé le Recensement des Etablissements de Commerce et de Service en 1931. Les résultats de ce recensement donnent les premiers renseignements précis sur le chiffre d'affaires des chaînes et sur la proportion de ce chiffre par rapport au commerce total de détail.

Les chaînes ne s'en sont pas tenues à l'exploitation du commerce de détail. Il existe des chaînes de banques, maisons de courtage, de journaux, d'élévateurs à grain, d'établissements manufacturiers et de divers autres genres d'entreprises commerciales outre les 523 chaînes d'établissements de commerce de détail et les 63 chaînes de service incluses dans le Recensement des l'établissements de Commerce et de Service et dont les opérations de 1930 sont résumées dans cette section du Volume XI du recensement de 1931.

Une somme considérable de détails touchant les opérations de ces chaînes se trouve dans les rapports sur le commerce de détail du Dominion et des provinces déjà publiés sous forme d'imprimés. Outre les données sur les magasins de chaîne pour chaque province en général, les divers bulletins provinciaux indiquent aussi le nombre de magasins de chaîne et le chiffre des ventes de ces magasins dans chaque ville de 30,000 habitants ou plus, premièrement, pour le commerce total de détail de la ville en général et, deuxièmement, pour les lignes de commerce dans lesquelles les chaînes ont une importance considérable.

Pour les rapports du commerce de détail en général, chaque magasin d'une chaîne a été classifié indépendamment du genre d'affaires qu'il conduit. Mais quelques chaînes exploitent des magasins qui ne peuvent pas tous être classifiées identiquement d'après le genre d'affaires. Pur exemple, plusieurs chaînes de denrées alimentaires exploitent des magasins dont plusieurs ne sont que de simples épiceries, tandis que d'autres vendent des épiceries et des viandes; ils sont classifiés comme "magasins combinés". Pour les rapports du commerce de détail en général, chaque magasin a été classifié comme magasin "combiné" ou comme épicerie, suivant que l'on vendait ou non des viandes fraîches en plus des articles d'épicerie ordinaire. Pour ce rapport, toutefois, il a été nécessaire de classifier chaque chaîne dans son ensemble d'après son commerce principal.

Si l'on établit une comparaison entre les renseignements sur les chaînes donnés dans cette section avec ceux que l'on trouve dans le sommaire fédéral du commerce de détail des magasins divisés d'après le genre d'affaires qu'ils conduisent, certaines différences apparaissent. On croit devoir fournir des explications sur ces différences. Après examen, on voit que le volume d'affaires crédité aux magasins de chaîne dans cette section est un peu inférieur à celui que l'on trouve dans le sommaire fédéral du commerce de détail. Ces différences dans la somme des ventes proviennent des méthodes employées dans la préparation de ces deux séries de rapports.

Dans un très grand nombre de cas, des succursales de magasins de chaîne furent ouvertes durant l'année 1930 et, en conséquence, le bilan fourni par les compagnies exploitant ces chaînes de magasins sur les affaires de ces succursales particulières ne couvrait qu'une partie de l'année durant laquelle ces dernières ont été sous leur direction. Dans plusieurs cas, des magasins de chaîne achetèrent durant l'année des établissements de commerce indépendants pour lesquels il fut impossible d'obtenir un rapport couvrant la partie de l'année antérieure à leur inclusion dans la chaîne. Pour cette raison, on a cru donner un tableau plus juste du volume total de commerce de détail dans chaque municipalité durant l'année en prolongeant à douze mois les opérations des magasins ouverts au cours de l'année. En d'autres termes, les chiffres donnés sur les affaires de l'an dernier ont été multipliés par le facteur qui semblait le plus raisonnable dans chaque cas pour obtenir les opérations de toute une année. En ce qui concerne les magasins de chaîne seulement, cette méthode tend à exagérer légèrement les ventes réelles des magasins de chaîne en 1930 mais, d'un autre côté, les résultats donnent une idée du volume d'affaires qu'auraient fait ces magasins de chaîne si chaque magasin avait été ouvert durant douze mois. On obtient de plus une idée plus juste du commerce de détail total des magasins de chaîne ou indépendants.

Le rapport actuel, toutefois, est basé sur les bilans compilés des magasins de chaîne couvrant toutes les opérations de l'année. On s'efforce dans ce rapport d'indiquer le volume réel d'affaires des chaînes de magasins durant 1930 sous un angle tout à fait différent de celui des sommaires

sur les provinces et le Dominion, dans lesquels on s'efforce surtout de donner le volume total d'affaires transigées dans chaque localité et dans le pays en général.

Définition des chaînes

Pour le Recensement des Etablissements de Commerce et de Serviee, il était entendu que les chaînes comprenaient les organisations exploitant quatre magasins et plus. Les firmes exploitant deux ou trois magasins sont appelées multiples de deux ou trois magasins et non des chaînes, et c'est sous ees désignations que leurs rapports apparaissent dans les sommaires du commerce de détail pour les provinces et le Dominion. En 1930, on comptait 4,857 magasins dans le commerce de détail appartenant à cette classe des magasins multiples et leurs ventes totales durant l'année s'élevaient à \$219,866,700. Ces magasins et ces ventes ne sont pas inclus ici.

Les chaînes volontaires, dans lesquelles les magasins appartiennent à des particuliers et sont exploités séparément mais groupés ensemble pour les fins d'achat et/ou de publicité, ne sont pas incluses dans l'analyse des chaînes faite ici. D'après les rapports du recensement, 4,988 magasins appartenant à quelque trente organisations différentes conduisaient leurs opérations sur cette base au Canada en 1930, et le volume total de leurs ventes s'est élevé à \$126,547,600. Du nombre total de magasins des chaînes volontaires, 235, avec des ventes s'élevant à \$7,517,200. étaient aussi membres des multiples de deux et trois magasins, et ont été inclus dans les chiffres déjà mentionnés pour cette catégorie.

Les compagnies de magasins de chaîne n'exploitent pas toutes un ou des entrepôts d'où les magasins individuels tirent leurs approvisionnements. Pour le Recensement des Etablissements de Commerce et de Service, on a obtenu des rapports de soixante-dix-neuf entrepôts de magasins de chaîne différents et leurs ventes totales en 1930 ont atteint \$161,912,300. Ces entrepôts ont été considérés comme établissements de gros et tous les ehiffres s'y rapportant sont inclus dans les rapports sur le commerce de gros, mais sont exclus de eeux des magasins de chaîne donnés iei.

Bien que toutes les chaînes n'exploitent pas des entrepôts de distribution, une forme quelconque d'achat central fait partie des opérations de tous les magasins de chaîne, car, sans ce
facteur, les avantages que comportent l'achat en masse disparaitraient. Dans un certain nombre
de cas, des succursales se sont établies aux environs d'un magasin principal et ce dernier alimente
les magasins individuels. De telles organisations seraient mieux désignées sous le tout de systèmes de succursales locales plutôt que sous le nom de chaînes, mais les renseignements reçus sur la
méthode suivie dans l'approvisionnement des différents magasins ne suffisaient généralement pas
à justifier l'emploi de cette classification. Toutes les organisations de détail exploitant au mons
quatre magasins conduisant le même genre d'affaires, ou un genre similaire, sont, par consequent,
classifiées comme chaînes.

Cadre du rapport

La première partie de ce rapport présente un sommaire des opérations de toutes les chaînes exploitant des établissements de commerce de détail ou des établissements de service. Pour chaque genre d'affaires dont s'occupent les chaînes, des reuseignements sont donnés sur le nombre de chaînes, le nombre de succursales de cec dernières, et sur les ventes totales des magasins de chaîne. Comme certaines chaînes exploitent des magasins qui tous ne peuvent être classifiés de la même façon d'après le genre d'affaires, il est impossible dans chaque cas d'indiquer le pourcentage que les ventes des chaînes représentent par rapport au commerce total de tous les magasins de la même catégorie. Ces pourcentages ou proportions ont été donnés pour chaque groupe faisant le même commerce en général et aussi pour quelques-tuns des genres les plus spécifiques d'affaires dans lesquels les chaînes jouent un rôle très important. Les chaînes sont ensuite classifiées d'après l'étendue du territoire que couvrent leurs succursales. On donne aussi des tableaux indiquant la distribution géographique des chaînes, les proportions d'affaires faites au comptant ou à crédit par les chaînes, et la croissance des chaînes au Canada en classifiant les unités de chaînes d'après la date de leur dernière aequisition.

Des rapports séparés sur les chaînes ont déjà été publiés donnant des analyses détaillées sur les catégories suivantes de chaînes: chaînes de magasins alimentaires, chaînes de pharmacies, chaînes de bazars, et chaînes de stations d'essence. Ces rapports ont été réunis ici, une section spéciale étant donnée à chaoun.

PART I—ALL RETAIL CHAINS

Summary by Groups

There were 523 chains reported in the retail merchandise field and these operated 8,575 stores with total net sales for 1930 of \$548,213,320. Total retail trade for all stores, including both chains and independents, amounted to \$2,755,569,900 so that chain store sales formed 19.89 per cent of the total retail business.

In the comparisons made in the following paragraphs between chain store sales and total sales, it should be noted that all figures relate to the total business transacted by stores grouped according to kind-of-business classifications and not to the sales of specified commodities. Since most kinds of business handle many commodities, the figures given herein provide no basis for determining what percentage of the total sales of any selected commodity is made by chain stores. A comparison may be made, however, between the sales of chain stores operating in a certain kind of business and the sales of all stores in that same kind of business.

The following table presents a summary of chain stores in Canada for 1930 by kind-ofbusiness groups and shows the number of chains, number of chain stores, value of chain sales, total sales and ratio of chain store sales to total sales.

SUMMARY OF RETAIL CHAINS IN CANADA, 1930

⁽¹⁾ Includes country general stores.
(2) Includes sales of second hand group.

Food Group.-In number of chains, number of stores, and total net sales, the food group was the most important in the chain store field. Altogether, 120 chains operated 2,669 units and did a total business of \$137,398,785 or 22.32 per cent of the sales of all food stores. The food group of chains is further broken down into several kind-of-business classifications and it is found that there were 44 grocery chains which operated 749 stores and had total sales of \$45,043,-653. In addition, there were 23 combination (grocery with meat department) store chains having 1,379 stores and total net sales of \$74,800,139. It must be borne in mind, however, that these combination store chains operated a great many straight grocery stores in addition to those units selling both groceries and meats and the figures given for combination store chains cover all stores operated by these companies irrespective of the kind of business carried on by each unit. In order to obtain a comparison of chain sales with total sales, it is necessary to combine the figures for grocery chains and combination store chains. When this is done, it is found that the 67 chains operating in these two fields had sales in 1930 of \$119,843,792, or rather less than 30 per cent of the total business of all grocery and combination stores.

General Merchandise Group.—In addition to department and country general stores, this group includes dry goods store and variety-store chains. In the variety-store classification, in addition to the popular 5-and-10c. chain stores, there have been included the chain systems which deal in higher priced lines of merchandise and which occupy an intermediate position between the 5-and-10c. and to-a-dollar stores on the one hand and the full-fledged department

stores on the other. There were 15 variety-store chains which operated 327 stores and had safes of \$39,383,379, or 89.08 per cent of the total sales of all variety stores. A number of the larger department stores operated by multiple organizations and situated in the larger centres were considered as independent establishments for the general retail reports and have, therefore, been excluded from this summary. The general merchandise group, as a whole, includes 52 chains which operated 611 stores and had total sales of \$107,077,192.

Automotive Group.—In the automotive field a total of 42 different organizations operated 843 units and did a total business of 34,736,535. This amount forms 9.00 per cent of the total sales for all retail establishments in this group. Ten motor vehicle dealer chains with 78 individual establishments had sales of \$19,174,965. Many other automobile dealers throughout the country act as agents for one particular make of car but these have been classified as independent establishments and are not included with the chains.

Twenty-eight filling station chains were reported and these operated 743 stations with sales of \$14,875,440, or 22.39 per cent of the business of all filling stations. In addition to the filling stations operated directly by chain companies, there were 1,355 stations reported as owned by the various gasoline companies but operated as leased stations by independent operators. These stations have been classified as independent establishments and not as chains.

Apparel Group.—In the apparel group of stores, chains did 14:13 per cent of the total retail business. There were 81 chains which operated 660 stores and had total sales of \$31.075,-260. Included in the total number were 14 women's apparel chains, 7 millinery, 3 furrier, and 4chains specializing in women's accessories. These 28 chains operated 203 stores and had total sales of \$8,584,799 or 12:30 per cent of the total sales for all such stores. There were 22 chains with 191 stores which specialized in men's wear and these did a total business of \$9,866,766 or 13.68 per cent of the total sales for all such stores. Shoe store chains, numbering 18, had total sales of \$7,876,966 through their 208 stores and these sales formed 21.94 per cent of the total business of all shoe stores.

Building Materials Group.—There were 46 lumber and building material chains which operated 1,035 yards and had sales of \$18,597,431 or 28.09 per cent of the total business of all such retail establishments. Hardware chains, numbering 13, operated 70 stores and had sales of \$4,217,927. This amount formed 6.37 per cent of the total sales for all hardware stores.

Furniture and Household Group.—In the furniture and household group, 37 chains operated 481 stores and these had total sales of \$29,404,176. This amount formed 28.92 per cent of the total business of all stores in the group. There were 8 furniture chains with 96 stores and \$9,367,872 sales, while the 7 radio chains, radio and electrical chains and radio and music chains operated 75 stores and did a total business of \$8,722,991. This amount, of course, does not represent the total sales of radios and musical instruments made through chain stores since these commodities are also sold in many other kinds of stores, particularly department stores and furniture stores. There were 19 household appliance chains which operated 287 stores and had total net sales of \$10,281,902 or 57.77 per cent of the business of all such stores. Included in this number are 13 chains owned by utility companies and selling gas and electrical appliances. These 13 chains operated 128 of the 287 stores and had sales of \$3,610,004 or 35 per cent of the business of all household appliance chains.

Restaurants, Cafeterias and Eating Places.—The 21 chains in this group operated 290 establishments and had receipts of \$14,283,226, or 18.80 per cent of the total business of all restaurants reporting to the Census of Merchandising.

Other Retail Stores.—The 31 drug store chains which were in operation during 1930 had 292 stores and did a total business of \$13,971,087 or 18.18 per cent of the total trade of all drug stores in the country. Chains were also important in the office and store mechanical appliance field, the 12 organizations in this classification operating 142 stores and having sales of \$8,300,254. Other classifications in which chains were a factor of importance include eigar and tobacco stores, fur trading posts, coal, wood and ice dealers, jewellery stores and dealers in office, store and school

Retail stores operated by government liquor commissions have been classified as chains for this census, the total retail sales reported amounting to \$100,394,009. Sales made through government mail order departments and warehouses were separately reported and are not included here.

Services.—In the retail service field, chain organizations were less important than in the merchandising. However, 63 multiple concerns, each operating four or more establishments were reported and these did a total business in 1930 of \$34,369,468. Chains were most important in the motion picture industry where 16 different organizations operated 168 theatres and hac total receipts of \$15,135,148. This amount formed 38.84 per cent of the total receipts for all theatres in Canada during 1930.

Types of Operation

In addition to classifying the various chains according to the kind of business carried on. they have also been classified as local, provincial, sectional and national, depending upon the extent of territory in which their branches were situated. Local chains are located entirely, or almost so, within the same town or city. The units of provincial chains are located within one province. The units of sectional chains are spread over two or three provinces, while national chains have stores in four provinces or more.

Manufacturer-controlled chains are operated to distribute at retail the products of a manufacturing concern which owns and operates the stores. These chains are interested in promoting the sale of a predetermined article rather than in studying the customer preferences of the community and in supplying a stock of merchandise to suit these requirements. Chains of this type are found operating chicfly in the store and office appliance field, though they are also found with other lines of merchandise. Manufacturer-controlled chains have also been classified according to territory covered and it will be noted that most of these organizations are national in extent.

It has already been stated that in 1930 there were 523 retail merchandising chains which operated 8,575 stores and had total sales of \$548,213,320. Of this number, 201 were local chains and these operated 1,335 stores and had total sales of \$67,698,433 or 12-36 per cent of the total clain store business. There were 203 provincial chains with 2,922 stores and sales of \$208,839,447 or 38.07 per cent of the total chain business. Sectional chains numbered 60 and these operated 1,010 stores and had sales of \$102,324,533 or 18.68 per cent of the total. There were 59 national chains which operated 2,622 stores and had sales of \$169,350,907 or 30.89 per cent of the total

Included in the figures given above were 36 manufacturer-controlled chains which operated a total of 449 stores. These stores had sales of \$37,260,569 or 6.79 per cent of the total chain store business.

In addition to classifying all chains as a whole according to type of operation, Table 3 also classifies the chains in selected kinds of business. Of the total sales of grocery, combination, and meat chains combined, it is seen that 14.04 per cent was made by local chains, 29.58 by provincial, while 9 sectional and 2 national chains together accounted for 56.38 per cent.

Of the 63 retail services chains, 20 were local, 21 provincial, 6 sectional and 16 national. The local and provincial chains each accounted for approximately 17 per cent of the total receipts. of all chains; the 6 sectional chains accounted for rather more than 9 per cent; and the 16 national chains received the remainder or 56.44 per cent. Of the theatre chains, 7 were local and these received 24.57 per cent of the total receipts of the group. The remainder, or 75.43 per cent, was accounted for by the 6 provincial, 1 sectional and 2 national theatre chains combined.

Cash and Credit Sales

Not all chains reported whether they extended credit or not. Table 5 shows the number reporting credit sales and also the number reporting that they sold only for eash. The difference between the sum of these two figures and the total number of chains for each kind of business, as given in Table 1, represents the number which did not report whether they sold for credit or not While credit sales were small during 1930 in grocery and combination chains, they formed a large portion of the total sales in furniture chains, household appliance chains, and office furniture and appliance chains.

Distribution by Provinces

Table 6 shows the geographical distribution of chains, chain stores and chain store sales hath for all shades on a whale and also for Jifferent 1.

tion groups. The corresponding ratios of chain store sales to total sales are also given. As sentioned earlier in this report, certain of the larger department stores belonging to multiple rganizations have been considered as independent stores for the general retail reports and have, serefore, been omitted from this summary. For this reason no valid comparison of chain sales to total sales by provinces can be made for all chains as a whole nor for the general merchandise roup of stores.

Apparel Group.—The total sales in 1930 of all apparel stores in Canada (chains and indeendents) amounted to \$219,968,600 and of this amount chain store sales formed 14·13 per ent. The ratio of chain sales to total sales was highest in Manitoba (17·64 per cent) and Ontario ame second with a ratio of 16·69 per cent.

Food Group.—For the country as a whole, sales of all chains classified in the food group ormed 22.32 per cent of the sales of all food stores. The percentage in Ontario was 29.53; a Saskatchewan, 27.40; and in Manitoba, 23.46.

Building Materials Group.—The two main classifications included in this group are hardvare chains and lumber and building material chains. Chains of the latter type are confined dmost exclusively to the Prairie Provinces and this fact is reflected in the percentages of chain ales to totals as shown in the table. For the group as a whole, Saskatchewan had the highest hain sales ratio, the sales of chains forming 42-91 per cent of the total. The ratio for Alberta was 35-84 per cent and for Manitoba 16-98 per cent.

Drug Chains.—Of the total business of all drug stores in the country (\$76,848,900), 18·18 per cent was transacted by chain stores. The percentage of chain sales to total sales was highest in British Columbia (31·28 per cent) and second highest in Ontario (19·85 per cent).

Age of Chain Units

The schedules used for the Census of Merchandising and Service Establishments asked that the various companies report the approximate date when each unit was acquired. Not all firms supplied this information but dates of establishment are available for 8,020 of the 8,575 units of all chains. Of these 8,020 units of retail merchandise chains whose ages could be determined, 984, or 12·27 per cent, were established in 1930. During the preceding four years, 1926 to 1929 inclusive, 38·67 per cent of the total number of chain units operating in 1930 were opened, while 3,935 stores, or 49·06 per cent of the total, were in operation prior to 1926.

For the Dominion as a whole, a greater number of chain units were opened in 1929 than in any other one year. During this interval 1,080 stores, or 13.47 per cent of the total number, were established. In the Maritime Provinces the greatest expansion in chain store units took place in 1930 when 18.08 per cent of the total number in that economic division were opened. The years of greatest chain store expansion for each of the other economic divisions, together with the percentages of units opened in these years, are as follows: Quebec, 1930, when 14.06 per cent of the total number in that province were opened; Ontario, 1928, with 15.30 per cent; Prairie Provinces, 1929, with 14.10 per cent; and British Columbia, 1929, with 13.61 per cent.

PARTIE I—TOUTES CHAÎNES DE DÉTAIL

Sommaire par groupes

En tout, 523 chaînes ont fait rapport pour la catégorie du commerce de détail; elles exploitaient 8,575 magasins dont les ventes totales nettes en 1930 se sont élevées à \$548,213,320. Le commerce de détail total pour tous les magasins, y compris les magasins de chaîne et les magasins indépendants, s'est élevé à \$2,755,569,900; donc, les ventes des magasins de chaîne forment 19.89 p.c. du total du commerce de détail.

Dans les comparaisons établies dans les paragraphes suivants entre les ventes des magasins de chaîne et les ventes totales, on doit remarquer que tous les chiffres se rapportent au total des affaires transigées par les magasins groupés d'après le genre d'affaires et non d'après les ventes de denrées spécifiées. Comme la plupart des genres d'affaires comprennent plusieurs denrées, les chiffres donnés ici ne peuvent servir de base pour déterminer quel pourcentage des ventes totales de tel ou tel article est au crédit des magasins de chaîne. On peut, cependant, établir une comparaison entre les ventes des magasins de chaîne s'occupant d'un certain genre d'affaires et les ventes de tous les magasins conduisant le même genre d'affaires.

Le tableau suivant présente un sommaire des magasins de chaîne au Canada, pour 1930, groupés d'après le genre d'affaires; il indique le nombre de chaînes, le nombre de magasins de chaîne, la valeur des ventes des chaînes, les ventes totales et la proportion des ventes des magasins de chaîne sur les ventes totales.

SOMMAIRE DES CHAÎNES DE DÉTAIL AU CANADA, 1930

Groupe	Nombre de chaines	Nombre de magasins de chaîne	Ventes nettes des chaînes, 1930	Ventes nettes, tous magasins, 1980	Pourcen- tage des chaines
			\$	\$	
Total, toutes chaines	523	8,575	548,213,320	2,755,569,900(2)	19.89
i roupe de l'alimentation. Groupe des marchandises générales(1). Groupe de l'autonobile. Groupe du vêtement. Groupe des matériaux de construction. Groupe des meubles et articles de ménage. Restaurants, cafétérias, et salles à manger. Autres magasins de détail.	62 37 21	2,669 611 843 600 1,122 481 290 1,899	137,398,785 107,077,192 34,736,535 31,075,260 23,919,411 29,404,176 14,283,226 170,318,735	615,476,100 680,346,300 281,059,300 219,968,600 162,237,100 101,665,900 75,977,100 506,126,900	22.32 15.74 9.09 14.13 14.74 28.92 18.80 33.65

Groupe de l'alimentation.-Par le nombre de chaînes, le nombre de magasins et les ventes nettes totales, le groupe de l'alimentation est le plus important. Dans l'ensemble, 120 chaînes ont exploité 2,669 magasins et leur chiffre total d'affaires a atteint \$137,398,785, soit 22.32 p.c. des ventes de tous les magasins de denrées alimentaires. Le groupe des chaînes de magasins alimentaires a été de plus subdivisé en plusieurs classes d'après le genre d'affaires, et l'on a trouvé qu'il existait 44 chaînes d'épiceries exploitant 749 magasins avec un chiffre total de ventes de \$45,043,653. De plus, il y avait 23 chaînes de magasins combinés (épiceries avec commerce des viandes) comptant 1,379 magasins avec un total de ventes nettes de \$74,800,139. Il faut se rappeler, toutefois, que ces chaînes de magasins combinés ont exploité un grand nombre d'épiceries proprement dites outre ces unités vendant des épiceries et des viandes, et les chiffres donnés pour les chaînes de magasins combinés sont ceux de tous les magasins exploités par ces compagnies, quel que soit le genre d'affaires de chaque unité. Pour établir une comparaison entre les ventes des chaînes et les ventes totales, il est nécessaire de réunir les chiffres des chaînes d'épiceries et des chaînes de magasins combinés. Cela fait, on voit que les 67 chaînes exploitant ces deux genres de commerce ont atteint un chiffre de ventes, en 1930, de \$119,843,792, ou un peu moins de 30 p.c. du commerce total de toutes les épicéries et de tous les magasins combinés.

⁽¹⁾ Y compris les magasins généraux de campagne. (2, Y compris les ventes du groupe de marchandise de seconde main.

Groupe des marchandises générales.—Outre les magasins à rayons et les magasins généraux de campagne, ce groupe inclut les chaînes de magasins de marchandises sèches et les bazars. Dans cette dernière catégorie, on a inclus, outre les magasins populaires de 5-10c., les chaînes qui vendent les lignes de marchandises un peu plus coûteuses; ces chaînes occupent une position intermédiaire entre les magasins de 5-10c. et les magasins de 1c. à \$1.00, d'un côté, et les magasins ordinaires à rayons de l'autre. Quinze chaînes de bazars ou magasins d'objets divers exploitaient 327 magasins avec ventes totales de \$39,383,379, soit 89.08 p.c. des ventes totales de tous les bazars. Un certain nombre des plus grands magasins à rayons exploités par des organisations multiples et situés dans les plus grands centres ont été classifiés comme établissements indépendants dans les rapports généraux sur le commerce de détail et ont, par conséquent, été exclus de ce sommaire. Le groupe des marchandises générales, dans l'ensemble, inclut 52 chaînes exploitant 611 magasins avec ventes totales de \$107,077,192.

Groupe de l'automobile.—Dans le domaine de l'automobile, un total de 42 organisations différentes ont exploité 843 unités avec un chiffre total d'affaires de \$34,736,535. C'ette somme représente 9.09 p.c. des ventes totales de tous les établissements de détail de ce groupe. Dix chaînes de marchands d'automobiles avec 78 établissements individuels ont atteint un chiffre de ventes de \$19,174,965. Plusicurs autres commerçants d'automobiles dans tout le pays sont agents d'une marque particulière d'automobiles, mais ces derniers ont été classifiés comme établissements indépendants et ne sont pas melus dans les chaînes. Vingt-huit chaînes de stations d'essence ont fait rapport et comptent 743 stations dont les ventes ont atteint \$11,875,440, ou 22-39 p.c. du commerce de toutes les stations d'essence. Outre les stations d'essence exploitées directement par ces compagnies de chaînes, 1,355 stations ont fait rapport comme succur-ales de compagnies d'essence, mais ces stations sont louées à des exploitants indépendants. On a classifié ces stations comme établissements indépendants et non comme chaînes.

Groupe du vêtement.—Dans le groupe des magasins de vêtement, les chaînes ont absorbé 14·13 p.c. du commerce total de détail. Quatre-vingt-une chaînes ont exploité 660 magasins, et leurs ventes totales ont atteint \$31,075,260. Incluses dans le nombre total se trouvainent 14 chaînes de confection pour femmes, 7 de modes, 3 de fourrures, et 4 chaînes se spécialisant dans le commerce de nouveautés pour femmes. Ces 28 chaînes ont exploité 203 magasins avec un total de ventes de \$8,584,799 ou 12·30 p.c. des ventes totales pour tous les magasins de ce genre. Vingt-deux chaînes avec 191 magasins se spécialisant dans la vente des vêtements d'homnes ont fait un chiffre d'affaires de \$9,866,766, soit 13·68 p.c. des ventes totales de tous les magasins de ce genre. Les chaînes de magasins de chaussures, au nombre de 18, ont atteint un chiffre total de ventes de \$7,876,966 avec 208 magasins et ces ventes égalent 21·94 p.c. du commèrce total de tous les magasins de chaussures.

Groupe des matériaux de construction.—Quarante-six chaînes faisant le commerce du bois et des matériaux de construction ont exploité 1,035 cours et leurs ventes se sont élevées à \$18,597,431, soit 28 09 p c du commerce total de tous les établissements de détail de ce genre. Les chaînes de quincailleue, au nombre de 13, ont exploité 70 magasms et leurs ventes ont été de \$4,217,927. C'ette somme représente 6 37 p c des ventes totales de tous les magasms de quincailleue.

Groupe des meubles et articles de ménage.—Dans ce groupe, 37 chaînes ont exploite 481 magasins dont les ventes totales ont atteint \$29,404,176. Cette somme forme 28,92 p.c. du commerce total de tous les magasins de ce groupe. Il existait 8 chaînes de nicubles avec 96 magasins et des ventes s'élevant à \$9,367,872, tandis que les 7 chaînes de radio ou chaînes de radio et appariels électriques, ou chaînes de radio et de musique ont exploité 75 magasins et fait un chiffre total d'affaires de \$8,722,991. Cette somme, naturellement, ne représente pas les ventes totales d'instruments radiographiques et de musique des magasins de chaîne puisque cer articles se vendent aussi dans plusieurs autres genres de magasin, surtout dans les magasins ? rayons et de meubles. Dix-neuf chaînes faisant le commerce des appareils de ménage ont exploite 287 magasins et fait un chiffre total d'affaires de \$10,281,902, ou 57·77 p.c. du commerce de tous les magasins de ce genre. Inclus dans ce nombre, se trouvent 13 chaînes appartenant à des compagnies d'utilités publiques vendant des appareils électriques ou à gaz. C'es 13 chaînes ont exploité 128 des 287 magasins et leurs ventes se sont élevées à \$3,610,004 ou 35 p.c. du commerce de toutes les chaînes d'appareils de ménage.

Restaurants, cafétérias et salles à manger.—Les 21 chaînes de ce groupe ont exploité 290 établissements dont les recettes ont été de \$14,283,226, ou 18.80 p.c. des affaires totales de tous les restaurants qui ont fait rapport au Recensement des Etablissements de Commerce et de Service, 1931.

Autres magasins de détail.—Les 31 chaînes de pharmacies en opération en 1930 avaient 292 magasins dont le chiffre total d'affaires s'est élevé à \$13,971,087, soit 18·18 p.e. du commerce total de toutes les pharmacies du pays. Les chaînes ont aussi joué un rôle important dans le commerce des appareils mécaniques de bureau et de magasm, les 12 organisations de ce groupe exploitant 142 magasins avec un total de ventes de \$8,360,254. Les autres catégories dans lesquelles les chaînes ont été un facteur important incluent les magasins de cigares et de tabac, les postes de commerce de fourrures, les commerçants de charbon, de bois et de glace, les magasins de bijouterie et les commerçants de meubles de bureaux, de magasins et d'écoles.

Les magasins de détail exploités par les commissions des liqueurs des gouvernements ont été classifiés comme chaînes dans ce recensement, le total des ventes de détail rapportées atteignant \$100,394,009. Les ventes faites par l'entremise des comptoirs postaux et des entrepôts des gouvernements ont fait l'objet de rapports séparés et ne sont pas incluses ici.

Services. Dans le commerce de détail des établissements de service, les chaînes ont joué un rôle moins important que dans le commerce des marchandises. Toutefois, 63 organisations multiples, exploitant chacune 4 établissements ou plus, ont fait rapport et leur commerce total en 1930 a atteint \$34,369,468. Les chaînes se sont occupées surtout de l'industrie du cunéma avec laquelle 16 organisations différentes ont exploité 168 théâtres avec recettes totales de \$15,135,148. Cette somme représente 38.84 p.c. des recettes totales de tous les théâtres au Camada en 1930.

Types d'opération

Ontre le classement des diverses chaînes d'après le genre d'affaires conduit, on les a aussi classifiées comme chaînes locales, provinciales, sectionelles et nationales, suivant l'étendue du territoire dans lequel leurs succursales étaient situées. Les chaînes locales sont situées entièrement, on presque entièrement, dans les limites de la même ville ou cité. Les unités des chaînes provinciales sont situées dans les limites d'une province. Les unités des chaînes sectionnelles sont dispersées dans deux ou trois provinces, tandis que les chaînes nationales ont des magasins dans quatre provinces ou plus.

Les chaînes contrôlées par les manufacturiers sont exploitées pour la vente en détail des produits d'une compagnie manufacturière qui possède et exploite les magasins. Le but de ces chaînes est de promouvoir la vente d'un article spécial, plutôt que d'étudier les préférences des chaînes de ce genre font surtout le commerce des fournitures de magasins et de bureaux, bien que plusieurs s'occupent d'autres lignes. Les chaînes contrôlées par les manufacturiers ont aussi été classifiées d'après le territoire desservi, et l'on remarquera que la plupart de ces organisations sont nationales à ce point de vue.

On a déjà dit qu'en 1930, 523 chaînes de magasins de détail exploitant 8,575 magasins avaient en un total de recettes de \$548,213,320. De ce nombre, 201 étaient des chaînes locales exploitant 1,335 magasins avec des ventes totales de \$67,698,433 ou 12,36 p.c. du commerce total des magasins de chaîne. Il y avait 203 chaînes provinciales avec 2,922 magasins dont les ventes ont été de \$208,539,447, soit 38,07 p.c. du total du commerce de ces chaînes. Il existant 60 chaînes sectionnelles exploitant 1,696 magasins dont les ventes ont été de \$102,324,533 ou 18,68 p.e. du total. Les chaînes nationales, au nombre de 59, ont exploité 2,622 magasins et le chiffre de leurs ventes a été de \$169,350,907 ou 30,89 p.c. du total des ventes des chaînes.

Les chiffres donnés ci-dessus incluent 36 chaînes contrôlées par les manufacturiers exploitant un total de 449 magasins. Les ventes de ces derniers se sont élevées à \$37,260,569 ou 6·79 p.c. du commerce total des magasins de chaîne.

Outre le classement de toutes les chaînes d'après le type d'opération, le tableau 3 classifie aussi les chaînes en genres particuliers d'affaires. Du total des ventes des épiceries, combinés, et des boucheries, 14·04 p.c. sont au crédit des chaînes locales, 29·58 p.c., des chaînes provinciales,

tandis que 9 ehaînes sectionnelles et 2 chaînes nationales ont absorbé enscmble $56 \cdot 38$ p.c. des ventes.

Des 63 chaînes d'établissements de service de détail, 20 étaient des chaînes locales, 21 provinciales, 6 sectionnelles et 16 nationales. Les chaînes locales et provinciales ont absorbé chacune environ 17 p.c. des recettes totales de toutes les chaînes; les 6 chaînes sectionnelles en ont absorbé un peu plus de 9 p.c.; et les 16 chaînes nationales ont absorbé le reste, soit 56.44 p.c. Des chaînes de théâtres, 7 étaient locales et ont absorbé 24.57 p.c. des recettes totales de ce groupe. Le reste, soit 75.43 p.c., fut absorbé par les 6 chaînes provinciales, 1 sectionnelle et 2 nationales ensemble.

Ventes au comptant et à crédit

Dans leurs rapports, toutes les chaînes n'ont pas déclaré si elles faisaient ou non crédit. Le tableau 5 indique le nombre de celles qui ont mentionné les ventes à crédit, et aussi le nombre de celles qui ont déclaré ne vendre qu'au comptant. La différence entre la somme de ces deux chiffres et le nombre total des chaînes de chaque genre d'affaires, donnés dans le tableau 1, représente le nombre des chaînes qui n'ont pas déclaré si elles faisaient ou non crédit. Bien que les ventes à crédit aient été faibles en 1930 dans les chaînes d'épiceries et chaînes de magasins combinés, elles forment une forte proportion des ventes totales des chaînes de magasins de meubles, d'appareils de ménage, de fournitures et accessoires de bureaux.

Distribution par provinces

Le tableau 6 indique la distribution géographique des chaînes, des magasins de chaîne et des ventes de ces magasins, pour ce qui est de toutes les chaînes ensemble et aussi pour différents genres d'affaires divisés en groupes généraux. On donne également les proportions des ventes des magasins de chaîne sur les ventes totales. Comme on l'a dit au commencement de ce rapport, certains des plus grands magasins à rayon appartenant aux organisations multiples out été considérés comme magasins indépendants dans les rapports généraux sur le commerce de détail, et ont été, par conséquent, omis dans ce sommaire. Pour cette raison, aucune comparaison utile ne peut être établie entre les ventes des chaînes et les ventes totales par provinces pour toutes les chaînes dans leur ensemble, ni pour le groupe des magasins de marchandises générales.

Groupe du vêtement.—Les ventes totales de tous les magasins de vêtements du Canada en 1930 (chaînes et magasins indépendants) se sont élevées à \$219,968,600 et, de ce montant, les ventes des magasins de chaîne ont absorbé 14·13 p.c. La proportion des ventes des chaînes sur les ventes totales a été la plus forte dans le Manitoba (17·64 p.c.), et l'Ontario vient ensuite avec une proportion de 16·69 p.c.

Groupe de l'alimentation.—Pour le pays en général, les ventes de toutes les chaînes incluses dans le groupe de l'alimentation forment 22.32 p.c. des ventes de tous les magasins de denrées alimentaires. Le pourcentage de l'Ontario est de 29.53; celui de la Saskatchewan, de 27.40; et celui du Manitoba, de 23.46.

Groupe des matériaux de construction.—Les deux principales catégories incluses dans ce groupe comprennent les chaînes de quincaillerie et celles du bois et des matériaux de construction. Les chaînes de la dernière catégorie se trouvent presque exclusivement dans les Provinces des Prairies, ce que l'on peut voir d'après les pourcentages des ventes des chaînes sur les totaux donnés dans le tableau. Pour le groupe dans son ensemble, la Saskatchewan avait la plus forte proportion de ventes de chaînes, ces dernières formant 42.91 p.c. du total. La proportion de l'Alberta était de 35.84 p.c. et celle du Manitoba, de 16.98 p.c.

Chaînes de pharmacies.—Du commerce total de toutes les pharmacies du pays (\$76,848,-900), 18·18 p.c. est au crédit des magasins de chaîne. Le pourcentage des ventes des chaînes sur les ventes totales a atteint son maximum dans la Colombie Britannique avec 31·28 p.c.; l'Ontario occupe le second rang avec 19·85 p.c.

Date d'établissement des unités de chaînes

Les questionnaires employés pour le Recensement des Etablissements de Commerce et de Service demandaient aux diverses compagnies de fournir des renseignements sur la date approximative de l'acquisition de chaque unité. Toutes les compagnies n'ont pas fourni ce renseignement, mais nous avons les dates de 8,020 unités sur 8,575 de toutes les chaînes. De ces 8,020 unités des chaînes de commerce de détail dont l'âge a pu être déterminé, 984 ou 12·27 p.c. ont été établies en 1930. Durant les quatre années précédentes, de 1926 à 1929 inclusivement, 38·67 p.c. du nombre total des unités de chaîne exploitées en 1930, furent ouvertes, tandis que 3,935 magasins, ou 49·06 p.c. du total, étaient en opération avant 1926.

Pour le Dominion en général, un plus grand nombre d'unités de chaîne furent ouvertes en 1929 qu'en toute autre année. Dans cet intervalle, 1,080 magasins, soit 13.47 p.c. du total furent établis. Dans les Provinces Maritimes, la plus grande expansion des magasins de chaîne eut lieu en 1930, alors que 18.08 p.c. du nombre total des magasins de cette division économique furent ouverts. Les années de plus grande expansion des magasins de chaîne pour chacune des autres divisions économiques, et les pourcentages d'unités ouvertes durant ces années, sont comme suit: Québec, 1930, année durant laquelle 14.06 p.c. du nombre total des magasins dans cette province furent ouverts; Ontario, 1928, avec 15.30 p.c.; Provinces des Prairies, 1929, avec 14.10 p.c.; et Colombie Britannique, 1929, avec 13.61 p.c.

Next all chains reported whether they extended credit or not. The above table includes only those chains which reported that they sold on credit or that they sold only for east. The difference between the total number of chains shown here and the total given in Table 1, represents the number of organisations which did not report as to their credit activities. Quelques chaines de magasins n'ont pas déclaré si elles oudient à crédit ou non. Le tableau d'-dessus ne couvre que les chaines qui ont répondu et déclaré qu'elles vendaient à crédit ou qu'elles ne vendaient qu'au comptant. La différence entre le nombre de chaines données ioi et le nombre domé dans le tableau i, représente le nom bre d'organisations qui n'ont pas répondu à cette question.

PART II-FOOD CHAINS

Introduction.—The food chains analyzed in this section are grocery store chains, combination store chains (those selling both groceries and meats), meat market chains and fish market chains. In 1930 the total sales of all stores, chains and independents, in these kinds of business were \$488,429,600 and, of this amount, chain sales were \$128,291,500 or 26.27 per cent. But the proportions of chain sales to total sales were much lower for meat markets and fish markets than for grocery and combination stores. When figures for meat and fish markets are excluded from the calculations it is found that the total trade of all retail grocery and combination stores amounted to \$405,403,400 and, of this amount, chains accounted for \$119,843,792 or 29.56 per cent.

The 44 grocery store chains shown in this report operated 749 stores and had total net sales of \$45,043,653. There were 23 organizations classified as combination store chains and these operated 1,379 stores and did a total business of \$74,800,139. It must be borne in mind, however, that these combination store chains operated a great many straight grocery stores in addition to those selling both groceries and meats, so that the amount just quoted greatly exceeds the sales made through chain units of the combination type. From Table 8 (b) it will be seen that the 1,379 stores operated by combination store chains included 665 straight grocery units with sales of \$23,478,835, 698 stores handling both groceries and meats with sales of \$51,011,609, and 16 meat stores with sales of \$309,695. For the general retail reports, each of these stores was classified independently according to its own kind of business. For this chain report it has been necessary to classify each chain in its entirety, and a chain has been classified as a combination store chain when at least 25 per cent of its business was conducted in stores of the combination type. There were 20 meat market chains and one fish market chain, having a combined total of 225 units and sales of \$8,447,682.

Growth of Food Chains.—Of the 2,218 units of grocery, combination, and meat and fish market chains which could be classified as to age, 336, or 15·1 per cent, were opened in 1980; 1,168, or 52·6 per cent, were opened during the interval 1926 to 1929, while the remaining 32·3 per cent were in operation prior to 1926. The greatest expansion in these food chains occurred in 1929 when 464 new units, or 20·9 per cent of the total, were opened. When classified both by provinces and by age it is found that 10 per cent of the food chain units operating in Manitoba during 1930 were in operation prior to 1926. The corresponding percentages for the other provinces are as follows: Ontario, 41·9 per cent; Alberta, 39·2 per cent; British Columbia, 39·7 per cent; New Brunswick, 28·6 per cent; Saskatchewan, 19·9 per cent; Quebec, 16·3 per cent; and Nova Scotia, 15·6 per cent. The two units operating in Prince Edward Island were both opened after 1926 while two stores in the Northwest Territories and Yukon were in operation prior to that date.

Distribution by Provinces and by Size of Locality.—Of the 2,353 stores analyzed in this report, 1,107, or 47·1 per cent, were located in Ontario and 495, or 21·0 per cent, were in Quebec. There were 406 units in the Prairie Provinces, 244 in British Columbia, and 99 in the Maritimes. Of the total sales of \$128,291,474 made through these chain stores, Ontario accounted for \$71,133,271, or over 55 per cent, and Quebee for \$23,708,263, or approximately 18·5 per cent. Table 10 shows the distribution of stores and sales by provinces and further analyzes the data according to size of locality. Of the total business of food chains in Canada during 1930, 44·52 per cent was transacted in cities of 100,000 population or over, while only 5·09 per cent may be attributed to places of less than 1,000 population.

Credit Sales of Food Chains.—Credit sales made by food chains are shown in Table 8 (a). Of the 44 grocery store chains, 12 having total sales of \$3,195,529 reported that they extended credit. These credit sales amounted to \$705,963 or 22 09 per cent of the sales of these same firms. Twenty-six chains, having total sales of \$38,239,134, reported that they sold only for cash, while 6 smaller chains did not report their credit activities. Eleven of the 23 combination store chains reported that they sold on credit. While the total sales of these 11 chains amounted

1189

to \$30,791,236, or over 41 per cent of the total sales of all combination store chains, some of them reported but a small credit item, so that credit sales amounted to but 3.94 per cent of the total sales of those extending credit. Six chains, with total sales of \$41,391,194, reported that they sold only for cash and 6 chains failed to indicate whether they sold for credit or not.

Of the 21 meat and fish market chains, 11, doing 73 per cent of the total business of the group, reported credit sales. Credit sales of these chains amounted to 51·41 per cent of their total business. Eight chains, with sales of \$2,082,929, reported that they sold only for each and two chains did not answer this part of the questionnaire.

Central Office Expenses.—Partial information only was received regarding head office salaries and wages and other overhead expenses, although the forms sent out asked that this be separately reported. Where the overhead expense was furnished, it was pro-rated over the individual stores on the basis of sales. Chain store warehouses were considered as wholesale establishments for this Census and have been included in the wholesale reports. Expenses in connection with these warehouses are, therefore, omitted from this report. In a number of cases, the head office of a chain organization is operated as a department of the warehouse rather than as a separate unit, so that in these cases head office expenses would be included in the warehouse returns.

In addition to the amounts paid in salaries and wages and rental costs, total operating expenses include such items as taxes, insurance, maintenance, delivery from stores, stationery and supplies, light, heat, power, interest on money borrowed for current business operations, and any other operating expense. The cost of goods purchased for resale was, of course, excluded as well as any items on capital account. Where wide discrepancies were found to exist in individual returns, the expense items were checked in order to avoid including any doubtful items which would materially affect the results. Due to the lack of uniformity in accounting practices, however, these operating expense ratios should only be considered as indicative of the costs of operation of these chains, although they are thought to be sufficiently accurate to justify the analysis given in this report.

Grocery Store Chain Operating Expenses.—The 44 grocery store chains analyzed in this report, and operating 749 stores with sales of \$45,043,653, had an average operating expense ratio of 11·47 per cent of net sales. Grocery store chain operating expenses have been analyzed in Table 11. The chains are first classified according to type of operation, next according to the number of units operated, then according to total sales volume, and finally by average sales per store. When analyzed according to number of units operated, it is found that the larger chains having more than 50 units had the lowest expense ratio, viz., 10·45 per cent of net sales, as compared with 14·18 per cent for chains having from 6 to 10 units and 13·66 per cent for chains having 4 or 5 stores. When classified according to average sales per store, chains whose average per unit exceeded \$60,000 had an operating expense ratio of 10·48 per cent of net sales as compared with 14·15 per cent for chains whose average annual sales per store were less than \$30,000. In a great many cases branches of chains were opened during the year 1930, so that in classifying the chains according to average sales per store it was necessary to make allowance for this factor by attributing to each chain the average number of stores in operation during the twelve months.

Commodities Sold by Grocery Store Chains.—Of the total sales of grocery store chains amounting to \$45,043,653, approximately 74 per cent could be analyzed according to commodities sold. Over 78 per cent of the sales volume analyzed represented general groceries; fresh fruits and vegetables accounted for 6.46 per cent; and household supplies, including soap, amounted to 5.66 per cent. The percentage for general groceries has been further analyzed in Table 12, showing that sales of sugar amounted to 7.76 per cent of the total sales of grocery chains; butter and cheese, 13.63 per cent; and eggs, 4.25 per cent.

Combination Store Chain Operating Expenses.—The 23 combination store chains, with 1,379 stores and \$74,800,139 net sales, operated on an average expense ratio of 17.39 per cent of sales. Of the total number of stores, 14.9 per cent were opened during the year 1930, the greatest percentage of growth being among the smaller chains of from 6 to 10 units. Operating expenses of these chains are analyzed in Table 13 in a manner similar to that followed for grocery chains. It should be remembered, however, that these chains operated varying numbers of straight grocery stores as well as stores of the combination type. Since the operating expense

of a combination store is greater than that of a grocery unit, this factor should be kept in mind when considering the expense ratios given in this report. When classified according to number of units operated, the lowest operating expense ratio was obtained by chains operating between 11 and 100 stores. These chains had an expense ratio to sales of 16·07 per cent, while both the larger chains having more than 100 units and the small chains with ten stores or less had somewhat higher figures.

Commodities Sold by Combination Store Chains.—Of the total sales of all combination store chains, 53·87 per cent represented the sale of groceries. The sale of meats amounted to 22·57 per cent, and fruits and vegetables, 11·11 per cent. The sales of other commodities are given in Table 14 and the total grocery item just mentioned is also further analyzed. It must be remembered, of course, that not all the stores in these combination chains sold meat: some were straight grocery stores while a few were purely meat markets. Thus, it is not correct to assume that 22·57 per cent was the average ratio that the sales of meat bore to the total sales of a typical chain unit of the combination type, where both groceries and meats were sold. The proportion of meats sold in a combination store is considerably in excess of that figure. These commodity percentages are based upon the total sales of all combination chains reporting sales by commodity classes, irrespective of the kinds of stores operated. Thus, while the percentages given in Table 14 may be used to determine the total sales of commodities sold by combination chains, they do not represent the average commodity sales percentages for either combination stores or grocery stores.

Meat and Fish Market Chain Operating Expenses.—The 21 meat market and fish market chains operated 225 stores and had total net sales of \$8,447,682. Total operating expense for all chains amounted to 20.94 per cent of sales. Chain operating expenses have been analyzed in a similar manner to that outlined for grocery and combination chains, but these percentages are heavily weighted by the expenses of one large firm. The lowest operating expense ratio is found to coincide with the highest average sales per store while the ratio is greatest for small chains whose total sales are less than \$100,000. Rental costs also vary more or less inversely with average sales per store.

Commodities Sold by Meat and Fish Market Chains.—Approximately 85 per cent of the total business of meat market chains represents the sale of meats and poultry. Butter and cheese account for 7.97 per cent of the total business; eggs, 3.40 per cent; and fish, 1.81 per cent. The remainder, or 1.94 per cent of the total, represents the sale of miscellaneous products. The commodities sold by meat market chains are analyzed in Table 16.

Middle Range Figures.—The expense figures given in the preceding paragraphs, and shown in Tables 11, 13 and 15, were obtained by totalling the expense data given for each chain and expressing this total as a percentage of the total sales of the same companies. That is to say, these are weighted averages in which a large chain has more weight in determining the expense ratio for the group than a smaller organization. In Table 17 average operating figures are given for the three types of chains analyzed in this section, in which each chain has been given the same weight irrespective of its size. Using this method, it is found that the average total operating expense for grocery chains was 13.62 per cent of net sales as compared with 11.47 per cent as obtained by the other method. Average operating expenses for combination store chains amounted to 16.70 per cent of sales and for meat market chains 19.36 per cent, as compared with 17.39 per cent and 20.94 per cent respectively, using the first method. Upon referring to Table 17 it will be seen that three values are given for total operating expenses under the headings: "Lower Limit of Middle Range", "Average of Middle Range", and "Upper Limit of Middle Range". The method of obtaining these three figures for total operating expense will be explained.

The total operating expense (including salaries, rent and other expenses) for each chain was expressed as a percentage of its total sales. These percentages were arranged in ascending order of magnitude. The series was then divided into three ranges: the lower range, consisting of the lower quarter of the figures; the upper range, consisting of the upper quarter of the figures; and the middle range, containing the remaining half of the figures. The average of the middle range was then found. Thus, after omitting the extremely high and low figures, due in most instances to exceptional circumstances, the remaining items were given equal weight in obtaining an 20939—764

average operating expense ratio for the group. The "Lower Limit of the Middle Range" and "Upper Limit of the Middle Range" are, of course, the two values at either end of the middle group of figures.

Upon referring to Table 17 it will be seen that the lower limit of the middle range for total operating expenses of grocery store chains was 11.59 per cent, the upper limit was 15.71 per cent, and the average of the middle range was 13.62 per cent. Or, in other words, one-quarter of the grocery store chains had a total operating expense ratio of less than 11.59 per cent of sales, onequarter of the chains had a total expense ratio of more than 15.71 per cent of sales, and one-half of the grocery store chains had an expense ratio lying between these two figures and centering around 13.62 per cent. The other items in this table were obtained in a manner similar to that followed in the case of total operating expense. For example, the average figure for payroll cost of grocery chains was 6.98 per cent of net sales. This figure was obtained by expressing the payroll cost of each chain as a percentage of its total sales, arranging these percentages in ascending order of magnitude, omitting the lower and upper quarters of the range, and taking the average of the middle group. The boundary figures of the middle range in this case were 5.75 per cent and 8.13 per cent. That is to say, one-quarter of the chains had a payroll cost of less than 5.75 per cent of sales, one-quarter of the chains had a payroll cost of more than 8.13 per cent, and one-half the firms had a payroll cost ratio lying between these figures, and the average of these ratios was 6.98.

Each item in Table 17 was obtained by arranging the corresponding items for each chain in an array and following the procedure already outlined for total operating expense and payroll cost. In interpreting these middle range figures, then, each item must be considered independently as neither all the high nor all the low figures came from the same reports. That is to say, the items in any column in this middle range table cannot be related to other items in the same column. For instance, the upper limit of the middle range for average sales per store of grocery chains was \$52,577. The upper limit of the middle range for total operating expense was 15·71 per cent of net sales. Obviously, however, these two values cannot be related since the grocery chains with high average sales per store have the smallest operating expense. Nor is it probable that any one chain would have all its items equal to the average figures given in this table, but it is thought that, considering each item independently, these middle range figures give a fair indication of chain operating results.

PARTIE II—CHAÎNES DE MAGASINS ALIMENTAIRES

Introduction.—Les chaînes de magasins alimentaires analysées dans cette section sont les chaînes d'épiceries, les chaînes de magasins combinés (vendant des épiceries et des viandes), les chaînes de boucheries et les chaînes de poissonneries. En 1930, les ventes totales de tous les magasins, de chaîne et indépendants, de ces genres d'affaires, se sont élevées à \$488,429,600 et, de cette somme, les ventes des chaînes ont absorbé \$128,291,500 ou 26·27 p.c., mais les proportions des ventes des chaînes sur les ventes totales ont été de beaucoup inférieures pour les boucheries et les poissonneries que pour les épiceries et les magasins combinés. Quand on soustrait les chiffres des houcheries et des poissonneries de ces calculs, on trouve que le commerce total de toutes les épiceries et de tous les magasins combinés s'élève à \$405,403,400 et, de cette somme, les chaînes absorbent \$119,843,792 ou 29·56 p.c.

Les 41 chaînes d'épiceries incluses dans ce rapport exploiteut 749 magasins et leurs ventes totales nettes se sont élevées à \$45,043,653. Vingt-trois organisations ont été classifiées comme chaînes de magasins combinés et elles ont exploité 1,379 magasins dont les ventes ont atteint \$74.500.130. Il ne faut pas oublier, toutefois, que ces chaînes de magasins combinés ont exploité un grand nombre d'épiceries proprement dites en outre de celles qui faisaient le commerce des épiceries et des viandes, de sorte que la somme que l'on vient de citer dépasse énormément les ventes faites dans les unités de chaîne du genre "combiné". Le tableau 8 (b) indique que les 1.379 magasins exploités par les chaînes de magasins combinés incluent 665 épiceries proprement dites dont les ventes se chiffrent à \$23,478,835; 698 magasins vendant des épiceries et des viandes et dont les ventes se sont élevées à \$51,011,609, et 16 boucheries dont les ventes ont été de \$309,-695. Pour les rapports du commerce général de détail, chacun de ces magasins a été classifié séparément d'après son genre d'affaires. Pour ce rapport sur les chaînes, il a été nécessaire de classifier chaque chaîne dans son ensemble, et l'on a classifié une chaîne comme chaîne de magasin- combinés quand au moins 25 p.c. de son commerce était conduit dans des magasins du type "combiné" Il y avait 20 chaînes de boucheries et une chaîne de poissonneries, ayant un total combiné de 225 unités et des ventes s'élevant à \$8,447,682.

Expansion des chaînes de magasins alimentaires.—Sur les 2,218 unités des chaînes d'épiceries, de magasins combinés, de boucheries et de poissonneries que l'on a pu classifier quant à la date d'établissement, 336 ou 15·1 p.c. avaient été établies en 1930; 1,168 ou 52·6 p.c. avaient été établies de 1926 à 1929; les autres, soit 32·3 p.c., existaient avant 1926. La plus grande expansion de ces chaînes de magasins alimentaires s'est produite en 1929 quand 464 nouveaux magasins, ou 20·9 p.c. du total, furent ouverts. Si l'on fait le classement par provinces et d'après la date d'établissement, on voit que 10 p.c. des unités de chaînes de magasins alimentaires en exploitation au Manitoba en 1930 existaient avant 1926. Les pourcentages correspondants pour les autres provinces sont les suivants: Ontario, 41·9 p.c.; Alberta, 39·2 p.c.; Colombie Britannique, 39·7 p.c.; Nouveau-Brunswick, 28·6 p.c.; Saskatchewan, 19·9 p.c.; Québec, 16·3 p.c.; et Nouvelle-Ecosse, 15·6 p.c. Les deux unités en exploitation dans l'Ile du Prince-Edouard avaient été établies toutes deux avant 1926, tandis que les deux magasins des Territoires du Nord-Ouest et du Yukon avaient aussi été ouverts antérieurement à cette date.

Distribution par provinces et par grandeur de la localité.—Des 2,353 magasins analysés dans ce rapport, 1,107 ou 47·1 p.c. sont situés dans l'Ontario et 495, ou 21·0 p.c., dans Québec. Les Provinces des Prairies en comptaient 406, la Colombie Britanique, 244, et les Provinces Maritimes, 99. Des ventes totales de \$128,291,474 faites par l'entremise de ces magasins de châne, l'Ontario a absorbé \$71,133,271 ou un peu plus de 55 p.c. et Québec, \$23,708,263, ou environ 18·5 p.c. Le tableau 10 indique la distribution des magasins et des ventes par provinces et analyse de plus les données par grandeur de la localité. Du commerce total des chânes de magasins alimentaires au Canada en 1930, 44·52 p.c. s'est fait dans des villes de 100,000 ou plus, tandis que 5·09 p.c. de ce commerce peut être assigné aux localités de moins de 1,000 habitants.

Ventes à crédit des chaînes de magasins alimentaires.—Les ventes à crédit de ces chaînes sont données au tableau 8 (a). Des 44 chaînes d'épiceries, 12 ont eu des ventes totales de

\$3,195,529. Elles ont fait crédit pour une somme de \$705,963, ou 22.09 p.c. de leurs ventes. Vingt-six chaînes, dont les ventes totales ont été de \$38,239,134 ont déclaré ne vendre qu'au comptant, tandis que 6 chaînes moins importantes n'ont rien mentionné au sujet du crédit. Onze des 23 chaînes de magasins combinés ont déclaré qu'elles faisaient crédit. Bien que les ventes totales de ces 11 chaînes aient atteint \$30,791,236, ou plus de 41 p.c. des ventes totales de toutes les chaînes de magasins combinés, quelques-unes ont déclaré n'accorder que peu de crédit, de sorte que les ventes à crédit ne forment que 3.94 p.c. des ventes totales des chaînes qui font crédit. Six chaînes, avec des ventes totales de \$41,391,194 ont déclaré qu'elles ne vendent qu'au comptant, et 6 autres n'ont rien mentionné à ce sujet.

Des 21 chaînes de boucheries et de poissonneries, onze, qui absorbent 73 p.e. du commerce total de ce groupe, ont déclaré faire crédit. Les ventes à crédit de ces chaînes forment 51·41 p.c. de leurs ventes totales. Huit chaînes, dont les ventes s'élèvent à \$2,082,929, ont déclaré ne vendre qu'au comptant, et 2 chaînes n'ont pas répondu à cette partie du questionnaire.

Dépenses des bureaux principaux.—Des renseignements partiels seulement ont été fournis sur les salaires et les gages et les dépenses fixes des bureaux principaux bien que les questionnaires distribués demandassent un rapport séparé à ce sujet. Dans les cas où les dépenses fixes ont été données, on les a réparties sur les magasins individuels proportionnellement au volume de leurs ventes. Les entrepôts des chaînes ont été considérés comme établissements de gros pour ce recensement, et ont été inclus dans les rapports sur le commerce de gros. Les dépenses de ces entrepôts ont été, par conséquent, omises dans ce rapport. Dans un certain nombre de cas, le bureau principal d'une chaîne est exploité comme département d'un entrepôt et non comme unité séparée, de sorte que dans ces cas les dépenses du bureau central scraient incluses dans les rapports des entrepêts. Outre les sommes payées en salaires et gages et loyers, les dépenses totales d'exploitation incluent certains item, comme les taxes, l'assurance, l'entretien, la livraison aux magasins, la papeterie et les fournitures, l'éclairage, le chauffage, l'énergie, l'intérêt sur l'argent emprunté pour les affaires courantes, et toute autre dépense d'exploitation. Le coût des marchandises achetées pour la vente a été, naturellement, exclus comme tout autre item au compte du capital. Lorsque des différences trop grandes ont été remarquées dans les rapports individuels, on a vérifié les dépenses, afin de n'inclure aucun item douteux qui affecterait trop les résultats. Vu le manque d'uniformité dans les systèmes de comptabilité, toutefois, on ne doit considérer ces pourcentages de frais d'exploitation qu'au point de vue du coût d'exploitation de ces chaînes, bien qu'on les croie assez exacts pour justifier l'analyse faite dans ce rapport.

Frais d'exploitation des chaînes d'épiceries.—Les 44 chaînes d'épiceries analysées dans ce rapport et exploitant 749 magasins avec ventes de \$45,043,653 ont eu un pourcontage moyen de frais d'exploitation de 11.47 p.c. sur les ventes nettes. Les frais d'exploitation des chaînes d'épiceries ont été analysés dans le tableau 11. Les chaînes sont d'abord classifiées d'après leur genre de commerce, puis d'après le nombre d'unités de chacune, puis d'après le volume total des ventes et, enfin, d'après la moyenne des ventes par magasin. Quand on les analyse d'après le nombre de magasins de chacune, on voit que les plus grosses chaînes ayant plus de 50 unités ont eu le pourcentage le moins élevé, soit 10.45 p.c. des ventes nettes, tandis que ce pourcentage était de 14·18 p.c. pour les chaînes ayant de 6 à 10 magasins, et de 13·66 p.c. pour celles qui possèdent 4 ou 5 magasms Quand on les classific d'après la moyenne des ventes par magasm, les chaînes dont la moyenne par unité a dépassé \$60,000 ont eu un pourcentage de frais d'exploitation de 10.46 p.c. des ventes nettes comparativement à 14.15 p.c. pour les chaînes dont les ventes annuelles moyennes par magasin ont été de moins de \$30,000. Dans un grand nombre de cas, des succursales de chaîne ont été ouvertes durant l'année 1930, de sorte qu'en classifiant les cliaînes d'après les ventes moyennes par magasin il a été nécessaire de tenir compte de ce facteur en attribuant à chaque chaîne le nombre moyen de magasius en exploitation durant les 12 mois.

Denrées vendues par les chaînes d'épiceries.—Des ventes totales des chaînes d'épiceries s'élevant à \$45,043,653, environ 74 p.c. a pu être analysé d'après les denrées vendues. Plus de 78 p.c. du volume des ventes analysées représentait des épiceries ordinaires: les fruits et légumes frais réprésentaient 6.46 p.c. et les articles de ménage, y compris le savon, représentaient 5.66 p.c. Le pourcentage des épiceries ordinaires a été analysé dans le tableau 12 qui indique que les ventes de sucre ont absorbé 7.76 p.c. des ventes totales des chaînes d'épiceries; le beurre et le fromage, 13.63 p.c.; et les œufs 4.25 p.c.

Frais d'exploitation des chaînes de magasins combinés.—Les 23 chaînes de magasins combinés, avec 1,379 magasins et \$74,800,139 de ventes nettes, ont fonctionné avec un pourcentage moyen de dépenses de 17·39 p.e. des ventes. Du nombre total des magasins, 14·9 p.e. ont été ouvert en 1930, le plus fort pourcentage d'expansion étant celui des petites chaînes de 6 à 10 unités. Les frais d'exploitation de ces chaînes sont analysés dans le tableau 13 d'une façon similaire à celle que l'on a adoptée pour les chaînes d'épiceries. On doit se rappeler, toutefois, que ces chaînes ont exploité différents nombres d'épiceries proprement dites, ainsi que des magasins du type "combiné". Comme les frais d'exploitation d'un magasin combiné sont plus forts que ceux d'une épicerie ordinaire, ce facteur ne doit pas être perdu de vue dans l'étude des pourcentages de dépenses donnés dans ce rapport. Quand le classement est fait d'après le nombre de magasins exploités, le pourcentage des frais d'exploitation a été le plus bas pour les chaînes possédant de 11 à 100 magasins. C'es chaînes avaient un pourcentage de dépenses sur les ventes de 16·07 p.c., tandis que les grosses chaînes avaient un pourcentage et les petites chaînes comptant 10 magasins ou moins avaient un chiffre un peu plus élevé.

Denrées vendues par les chaînes de magasins combinés.—Des ventes totales de toutes les chaînes de magasins combiné, 53-87 p.c. représente la vente d'épiceries. Celle des viandes représentait 22-57 p.c., et les fruits et légumes, 11-11 p.c. Les ventes d'autres denrées sont donnés dans le tableau 14, et l'item total d'épiceries qu'on vient de mentionner est aussi analysé davantage. On doit se rappeler, naturellement, que tous les magasins de ces chaînes combinées n'ont pas fait le commerce des viandes; quelques-uns étaient des épiceries proprement dites, tandis que d'autres étaient de simples boucheries. Donc, il n'est pas juste de supposer que 22-57 p.e. était le pourcentage moyen des ventes de viandes sur les ventes totales d'un magasin de chaîne du type "combiné" quand des épiceries et des viandes étaient vendues. La proportion de viandes vendues dans un magasin combiné est considérablement plus élevée que ce chiffre. Ces pourcentages de denrées sont basés sur les ventes totales de toutes les chaînes de magasins combinés qui ont divisé leurs ventes par catégories sans tenir compte des genres de magasins exploités. Donc, bien que les pourcentages donnés dans le tableau 14 puissent servir à déterminer les ventes totales de denrées vendues par les chaînes de magasins combinés, ils ne représentent pas les pourcentages moyens de ventes des denrées dans les magasms combinés ou dans les épiceries.

Frais d'exploitation des chaînes de boucheries et de poissonneries.—Les 21 chaînes de boucheries et de poissonneries ont exploité 225 magasins, et leurs ventes totales nettes se sont élevées à \$8,117.682. Les dépenses totales d'exploitation pour toutes les chaînes ont été de 20.91 p.c. des ventes. Les dépenses d'exploitation des chaînes ont été analysées d'une façon similanc à celles des chaînes d'épiceries et de magasins combinés, mais ces pourcentages sont fortement affectées par les dépenses d'une grosse compagnie. Le pourcentage de dépenses d'exploitation le plus has comeide avec les ventes moyennes les plus élevées par magasin, tandis que le pourcentage est le plus fort pour les petites chaînes dont les ventes totales n'atteignent pas \$100.000. Les loyers varient également plus ou moins en sens inverse des ventes moyennes par magasin.

Denrées vendues par les chaînes de boucheries et de poissonneries.—Environ 85 p.c. du commerce total des chaînes de boucheries représente la vente de viandes et de volaille Le beurre et le fromage absorbent 7-97 p.c. du commerce total; les œufs, 3-40 p.c.; et le poisson, 1-81 p.c. Le reste, soit 1-94 p.c. du total, représente la vente de denrées diverses. Les denrées vendues par les chaînes de boucheries sont analysées dans le tableau 16.

Chiffres de la médiane.—Les chiffres des ventes données dans les paragraphes précédents, et inclus dans les tableaux 11, 13 et 15, ont été obtenus en additionnant les chiffres de dépenses fournis par chaque chaîne, et en convertissant ce total en un pourcentage des ventes totales des mêmes compagnies. C'est-à-dire, ce sont là des moyennes pondérées dans lesquelles une grosse chaîne a plus de poids dans l'établissement du pourcentage des dépenses du groupe qu'une organisation moins importante. Le tableau 17 donne les chiffres moyens d'exploitation pour les trois types de chaînes analysés dans cette section, et dans lequel on a accordé à chaque chaîne le même poids quelle que soit son importance. Avec cette méthode, on voit que les dépenses moyennes totales d'exploitation des chaînes d'épiceries égalent 13-62 p.c. des ventes nettes, contre 11-47 p.c. obtenu avec l'autre méthode. Les dépenses moyennes d'exploitation des chaînes de magasins combinés forment 16-70 p.c. des ventes, et celles des chaînes de boucheries, 19-36 p.c. contre

17.39 p.c. et 20.94 p.c., respectivement, avec la première méthode. Si l'on consulte le tableau 17, on verra que trois valeurs sont données pour les dépenses totales d'exploitation sous les titres suivants: "Limite inférieure de la série médiane", "Moyenne de la série médiane", et "Limite supérieure de la série médiane". On expliquera la méthode suivie pour obtenir ces trois chiffres des dépenses totales d'exploitation.

Le total des frais d'exploitation (comprenant les salaires, loyers and autres dépenses) pour chaque chaîne a été exprimé en un pourcentage de ses ventes totales. C'es pourcentages furent disposés en série ascendante. La série fut ensuite divisée en trois catégories. La plus basse comprenait le quart des chiffres les moins étevés; la plus haute, le quart des chiffres les plus élevés; la série centrale comprenait l'autre moitié des chiffres. On établit ensuite la moyenne de la catégorie centrale. Ainsi, après avoir omis les chiffres extrêmement hauts et les chiffres excessivement bas, dus dans la plupart des cas à des circonstances exceptionnelles, on accorda au reste des item une valeur égale pour établir la proportion moyenne des dépenses d'exploitation de ce groupe. La "Limite inférieure de la série médiane" et la "Limite supérieure de la série médiane" sont, naturellement, les deux valeurs à chaque extrémité du groupe central de chiffres.

Si l'on consulte le tableau 17, on verra que la limite inférieure de la catégorie centrale pour les dépenses totales d'exploitation des chaînes d'épieeries est de 11.59 p.c., la limite supérieure, de 15.71 p.c. et la moyenne de la catégorie centrale, de 13.62 p.c. Ou, en d'autres termes, un quart des chaînes d'épiceries ont un pourcentage de dépenses totales d'exploitation de moins de 11.59 p.c. des ventes, un quart des chaînes ont un pourcentage de dépenses totales de plus de 15.71 p.c. des ventes, et la moitié des chaînes d'épiceries ont un pourcentage de dépenses entre ces deux chiffres et aux environs de 13.62 p.c. On a obtenu les autres item de ce tableau d'après une méthode similaire à celle que l'on a adoptée dans le cas des dépenses totales d'exploitation. Par exemple, le chiffre moyen du bordereau de paye des chaînes d'épiceries est de 6.98 p.e. des ventes nettes. On a obtenu ee chiffre en transformant le montant du borderqui de pave de chaque chaîne en un pourcentage de ses ventes totales, distribuant ces pourcentages en une série ascendante, omettant les quarts supérieur et inférieur de la série et prenant la moyenne du groupe central. Les chiffres avoisinants le groupe central dans ce cas sont de 5.75 p.c. et 8.13 p.c. C'est-à-dire, un quart des chaînes ont un bordereau de paye de moins de 5.75 p.e. des ventes, un quart des chaînes ont un bordereau de paye de plus de 8 · 13 p.c. et la moitié des compagnies ont un pourcentage entre ces deux chiffres pour leur bordereau de paye, et la moyenne de ces pour-

On a obtenu chaque item du tableau 17 en plaçant les item correspondants de chaque chaîne en série et en suivant la procédure déjà expliquée pour les dépenses totales d'exploitation et pour le bordereau de paye. En étudiant ces chiffres du groupe central, alors, chaque item doit être étudié indépendamment des autres, car tous les chiffres élevés ou très bas n'ont pas été tirés des mêmes rapports. C'est-à-dire, les item de toute colonne de ce groupe central du tableau ne peuvent être comparés avec d'autres item de la même colonne. Par exemple, la limite supérieure du groupe central pour les ventes moyennes par magasins des chaînes d'épiceries est de \$52,577. La limite supérieure du groupe central pour les dépenses totales d'exploitation est de 15-71 p.c. des ventes nettes. Toutefois, il est évident que ces deux valeurs ne peuvent avoir aucun rapport entre elles, puisque les chaînes d'épiceries avec des ventes moyennes élevées par magasin out les plus faibles dépenses d'exploitation. De plus, il n'est pas probable qu'une chaîne ait tous ses item égaux aux chiffres moyens de ce tableau, mais on croit qu'en étudiant chaque item séparément, ces chiffres du groupe central donnent une juste idée des résultats d'exploitation des chaînes.

Since each item in this table was obtained independently, the figures in any one column cannot be related to each other. Or can the individual expense items be added to obtain the total expense ratios shown. For explanations on the method of obtaining these figures, see introduction.

Comme chaque item de ce tableau a été obtenu indépendamment, les chiffres d'une colonne n'ont aucun rapport avec ceux de l'autre. Ainsi, il est impossible d'additionner les item individuels de dépenses pour obtenir le total montré. Pour explication de la méthode par laquelle ces chiffres sont établis voir l'introduction.

PART III—DRUG STORE CHAINS

Introduction.—This section deals with the operations of drug store chains, of which then are 31 operating in Canada during 1930. These 31 chain companies operated 292 stores and ad total sales in 1930 amounting to \$13,971,087 or 18·18 per cent of the business transacted by II drug stores. Of the total number of chain firms, 8 having a total of 103 stores indicated that hey operated lunch counters in connection with their business, while 23 chains with 189 stores reported that they did not extend this service. The 8 chains with lunch counters had total sales f \$5,858,431, of which lunch counter receipts, including soda fountain sales, amounted to \$926,660 r almost 16 per cent of the total sales of these chains.

The 31 chains required the services of 1,165 full-time male employees and 255 full-time emale employees, who received a total of \$1,859,718 in salaries and wages. Part-timers received 21,185. The total wage bill was, therefore, \$1,880,903, and other operating expenses, including ent, amounted to about the same figure, or \$1,888,927, thus making a total operating expense of ti-98 per cent of net sales. Of the total number of stores, 282 were operated in leased premises, or which rental costs averaged 6.19 per cent of sales in such premises.

Distribution of Stores and Sales by Provinces.—Of the 292 units of drug chains operating a Canada during 1930, 137 were located in Ontario and 54 were in Quebec. British Columbia ame next with 41 units, followed by the Prairie Provinces with 37 and the Maritime Provinces rith 23. Of the total drug chain sales, Ontario accounted for approximately one-half, or 50·03 er cent, while Quebec accounted for 16·95 per cent. The proportions in the remaining provinces rere: British Columbia, 14·62 per cent; the Prairie Provinces, 12·73 per cent; and the Maritime Provinces, 5·67 per cent.

Growth of Drug Store Chains.—Of the 270 units of drug store chains whose ages could be letermined, 27, or 10 per cent, were opened in 1930; 81, or 30 per cent, were opened during the rerical 1926 to 1929; while 162, or 60 per cent, were in operation prior to 1926. In Table 20 (a) trug store chain units are classified both by provinces and by date of establishment, while in Table 20 (b) they are classified according to date of establishment and size of chain.

Credit Sales.—Ten of the 31 drug store chains reported that they sold on credit. Total at sales of these ten chains amounted to \$2,599,881 and credit sales were \$299,638 or 11.52 per ent of the total. There were 13 chains with total sales of \$8,355,606 which reported that they old only for eash, while the remaining 8 organizations did not indicate whether they sold for redit or not.

Operating Expenses.—In addition to the amounts paid in salaries and wages and rental osts each firm was asked to report other operating expenses. Other operating expenses include axes, insurance, maintenance, delivery from stores, stationery and supplies, light, heat, power, atterest on money borrowed for current business operations, and any other operating expense. The cost of goods purchased for re-sale was, of course, excluded as well as any items on capital ecount. Chain store warehouses were considered as wholesale establishments for the Census of derchandising and Service Establishments and have been included in the wholesale reports. Expenses in connection with these warehouses are, therefore, excluded from this report.

Operating expenses are analyzed in Table 21. The chains are classified, firstly, according o type of operation, secondly, according to number of stores operated, next, by total sales volume if the chain, and finally by average sales per store. A table is also included showing operating xpenses of chains operating lunch counters as compared with those not providing this service.

Of the 31 organizations analyzed in this bulletin, 24 were local chains each operating entirely vithin one town or city. There were 5 chains each operating entirely within one province although to confined to one city, and two chains had stores spread over two or more provinces. The 24 ocal chains operated 174 stores and had sales of \$6,696,634 or approximately 48 per cent of the otal sales of all drug chains. Total operating expense for local chains amounted to 26.66 per ent of net sales as compared with 27.28 per cent for provincial, sectional and national chains.

20939---771 1207

A classification according to number of units operated shows that there were 6 chains with more than 10 stores each, 10 chains with from 6 to 10 units each, and 15 chains each having less than 6 stores. The 6 chains each having more than 10 units operated 50 per cent of the total number of drug chain stores and accounted for approximately 60 per cent of the total drug chain sales. These 6 chains operated on a total expense ratio to sales of 26·27 per cent as compared with 27·67 per cent for chains having from 6 to 10 units, and 28·52 per cent for chains with less than 6 units.

There were 5 chains each having a total sales volume of over \$500,000, and there were 4 chains each of whose total sales for the year amounted to less than \$100,000. The highest operating expense ratio, 29·10 per cent of net sales, was reported by chains whose total sales volume lay between \$100,000 and \$250,000 and the lowest, 26·17 per cent of net sales, was obtained by the 5 largest chains already mentioned.

When analyzed according to average sales per unit, it is found that the lowest total operating expense ratio was obtained by the 10 chains having average annual sales per store of over \$45,000 and the highest ratio was obtained by those chains whose average sales per store were less than \$30,000.

In Table 21 (e) a distinction has been made as between chains operating stores with lunch counters and those which did not provide this service. The 8 chains selling meals operated 103 stores and had total sales for 1930 of \$5,858,431, of which the sale of meals amounted to \$926,660. These chains operated on an expense ratio to sales of 28.57 per cent, of which payroll amounted to 14.01 per cent and other operating expenses, including rent, 14.56 per cent. Rent paid for leased premises amounted to 7.51 per cent of sales made in these premises. In comparison with these figures, chains providing no lunch counter service operated on an expense ratio of 25.84 per cent of net sales. This figure includes a payroll item of 13.07 per cent and other operating expenses of 12.77 per cent of net sales. Rental cost to sales amounted to 5.23 per cent, as compared with 7.51 per cent for chains operating lunch counters.

Middle Range Figures.—The expense figures mentioned in the preceding section and shown in Table 21 were obtained by totalling the expense data given for each chain and expressing this total as a percentage of the total sales of the same companies. That is to say, these are weighted averages in which a large chain has more weight in determining the ratio for the group than a smaller organization. In Table 22 average operating figures are shown in which each chain has been given the same weight irrespective of its size. The method followed in obtaining these uniformly weighted or "Middle Range Figures" is outlined in the preceding section on "Food Chains".

Using this method, it is found that the average operating expense ratio for drug store chains was 27.89 per cent of net sales. This compares with the former figure of 26.98 per cent, which was obtained from a comparison of the aggregate sales and aggregate expense data of the several firms. Table 22 also shows that one-quarter of the drug store chains had an operating expense ratio to sales of less than 24.33 per cent while another quarter had an expense ratio of more than 31.54 per cent of sales. The remaining half of the firms had an operating expense ratio lying between these two figures and centering around the average figure of 27.89 per cent already mentioned.

Commodities Sold by Drug Store Chains.—A partial analysis of the sales made by drug chains is given in Table 23. Very few of the larger chains were able to break down their total sales in accordance with the outline provided in the Census schedules but, whenever possible, a breakdown, even if incomplete, was secured. Due to the incompleteness of the data received for these drug chains, the percentages given for the various commodities should only be considered approximately correct. Sales of drugs and drug sundries are shown to form 47.42 per cent of the total drug chain sales and this group is further analyzed showing the proportions attributed to prescriptions, drugs and patent medicines and compounds, rubber and drug sundries. Toilet articles and preparations were next in importance, amounting to 29.55 per cent of the total, while receipts from the sale of meals, including ice cream and soda fountain sales, amounted to 9.57 per cent of all drug chain sales.

PARTIE III—CHAÎNES DE PHARMACIES

Introduction.—Cette section traite des opérations des chaînes de pharmacies dont 31 faisaient affaires au Canada en 1930. Ces 31 chaînes exploitaient 292 magasins et le total de leurs ventes, en 1930, s'est élevé à \$13,971,087, soit 18·18 p.c. des affaires de toutes les pharmacies. Huit des chaînes, ayant un total de 103 magasins ont déclaré qu'elles tenaient des buffets en marge de leur commerce, tandis que 23 chaînes ayant 189 magasins ont déclaré ne pas fournir ce service. Les ventes totales des huit chaînes avec buffets s'élevaient à \$5,858,431 dont \$926,660, on presque 16 p.c. du total de leurs ventes, représentent les recettes des buffets ou des fontaines de liqueurs douces.

Les 31 chaînes ont employé régulièrement 1,165 hommes et 255 femmes qui ont reçu en salaires et gages un total de \$1,859,718. Les employés irréguliers ont reçu \$21,185. Le bordereau total de paye, par conséquent, a été de \$1,880,903, et les autres dépenses d'exploitation, y compris les loyers, ont atteint à peu près le même chiffre, ou \$1,888,927, ce qui donne pour les dépenses totales d'exploitation $26\cdot98$ p.c. des ventes nettes. Du nombre total des magasins, 282 faisaient affaires dans des locaux loués, et les frais de loyers se sont elevés en moyenne à $6\cdot19$ p.c. des ventes faites dans ces locaux.

Distribution des magasins et des ventes par provinces.—Des 292 unités des chaînes de pharmacies en opération au Canada en 1930, 137 étaient situées dans l'Ontario et 54 dans le Québec. Venait ensuite la Colombie Britannique avec 41 unités, puis les Provinces des Prairies avec 37 et les Provinces Maritimes avec 23. Du total des ventes des chaînes de pharmacies, l'Ontario en a absorbé environ la moitié, ou 50-3 p.c., tandis que Québec en absorbait 16-95 p.c. Les proportions des autres provinces étaient les suivantes: Colombie Britannique, 14-62 p.c.; les Provinces des Prairies, 12-73 p.c.; et les Provinces Maritimes, 5-67 p.c.

Expansion des chaînes de pharmacies.—Des 270 unités des chaînes de pharmacies dont la date d'établissement a pu être déterminée, 27, ou 10 p.c., furent ouvertes en 1930; 81, ou 30 p.c., furent ouvertes durant la période 1926 à 1929; 162, ou 60 p.c., existaient avant 1926. Dans le tableau 20 (a) les unités des chaînes de pharmacies sont classifiées par provinces et par date d'établissement, tandis que dans le tableau 20 (b) elles sont classifiées d'après la date d'établissement et l'importance de la chaîne.

Ventes à crédit.—Dix des 31 chaînes de pharmacies ont déclaré vendre à crédit. Les ventes nettes totales de ces 10 chaînes se sont élevées à \$2,599,881 et les ventes à crédit, à \$299,638, soit 11.52 p.c. du total. Treize chaînes avec ventes totales de \$8,355,606 ont déclaré ne vendre qu'au comptant, tandis que les 8 autres n'ont rien mentionné à ce sujet.

Frais d'exploitation.—Outre les sommes payées en salaires et gages et en loyers, chaque compagnie a été priée de faire rapport sur ces autres dépenses d'exploitation. Ces dernières incluent les taxes, l'assurance, l'entretien, la livraison, la papeterie et les accessoires, l'éclairage, le chauffage, l'énergie, l'intérêt sur l'argent emprunté pour les opérations courantes, et toutes autres dépenses d'exploitation. Le coût des marchandises achetées pour la vente a été, naturellement, exclus comme aussi tout autre item au compte du capital. Les entrepôts des chaînes ont été considérés comme établissements de gros pour le Recensement des Etablissements de Commerce et de Service et ont été inclus dans les rapports sur le commerce de gros. Les dépenses de ces entrepôts ont été, par conséquent, exclues de ce rapport.

Les frais d'exploitation ont été analysés dans le tableau 21. Les chaînes ont été classifiées, d'abord, d'après la genre de commerce, ensuite, d'après le nombre de magasins exploités, puis d'après le volume total des ventes de la chaîne et, enfin, d'après les ventes moyennes par magasin. On a également inséré un tableau indiquant les frais d'exploitation des chaînes exploitant des buffets et on a établi une comparaison avec ceux qui ne maintiennent pas ce service.

Des 31 organisations analysées dans ce bulletin, 24 étaient des chaînes locales faisant entièrement affaires dans les limites d'une ville ou cité. Cinq chaînes conduisaient leurs opérations entièrement dans les limites d'une province sans s'en tenir à une seule ville, et deux chaînes avaient des magasins distribués un peu partout dans deux provinces ou plus. Les 24 chaînes locales exploitaient 174 magasins, et leurs ventes ont été de \$6,696,634 ou d'environ 48 p.c. des ventes totales de toutes les chaînes de pharmacies. Les dépenses totales d'exploitation des chaînes

locales ont absorbé 26.66 p.c. des ventes nettes contre 27.28 p.c. pour les chaînes provinciales, sectionelles et nationales.

Un classement d'après le nombre d'unités indique que 6 chaînes exploitaient plus de 10 magasins chaeune, 10 en exploitaient de 6 à 10 chaeune et 15, moins de 6 chaeune. Les 6 chaînes exploitant plus de 10 magasins possédaient 50 p.c. du nombre total des pharmacies de chaîne et ont absorbé environ 60 p.c. des ventes totales des chaînes de pharmacies. Les dépenses totales de ces 6 chaînes formaient 26·27 p.c. des ventes totales contre 27·67 p.c. pour les chaînes comptant de 6 à 10 unités, et 28·52 p.c. pour les chaînes comptant moins de 6 unités.

Cinq chaînes ont eu chacune un volume total de ventes de plus de \$500,000 et 4, un volume de moins de \$100,000. Le pourcentage le plus élevé des frais d'exploitation, soit 29·10 p.c. des ventes nettes, est celui des chaînes dont le volume total des ventes se trouvait entre \$100,000 et \$250,000 et le plus bas, soit 26·17 p.c. des ventes nettes, est celui des 5 plus grosses chaînes déjà mentionnées.

Si l'analyse est faite d'après les ventes moyennes par unité, on voit que le pourcentage le moins élevé de frais d'exploitation est celui des 10 chaînes dont les ventes annuelles moyennes par magasin ont été de plus de \$45,000, et le pourcentage le plus élevé, celui des chaînes dont les ventes moyennes par magasin ont atteint moins de \$30,000.

Dans le tableau 21 (e), on établit une distinction entre les chaînes dont les magasius exploitent des buffets et celles qui ne donnent pas ce service. Les 8 chaînes donnant des repas exploitaient 103 magasius et leurs ventes totales, en 1930, ont atteint \$5,858,431; la vente de repas représentait là-dessus \$926,660. Le pourcentage des dépenses de ces chaînes sur les ventes a été de 28.57 p.c., le bordereau de paye représentant 14.01 p.c. et les autres dépenses d'exploitation, y compris les loyers, 14.56 p.c. Les loyers représentent 7.51 p.c. des ventes faites dans les locaux loués. Comparativement à ces chiffres, les chaînes ne maintenant aucun buffet avaient un pourcentage de dépenses de 25.84 p.c. sur les ventes nettes. Ce pourcentage inclut le hordereau de pays, soit 13.07 p.c., et les autres dépenses d'exploitation, 12.77 p.c., des ventes nettes. Les loyers représentent 5.23 ρ.c. des ventes contre 7.51 p.c. pour les chaînes exploitant des buffets.

Cadre de la série médiane.—On a obtenu les chiffres des dépenses mentionnés dans la section précédente et donnés dans le tableau 21 en additionnant les item de dépenses de chaque chaîne, et on a exprimé ce total sous forme de pourcentage des ventes totales des mêmes compagnies. C'est-à-dire, ce sont là des moyennes pondérées dans lesquelles une grosse chaîne a, dans le calcul du pourcentage du groupe, plus de poids qu'une organisation moins importante. Le tableau 22 donne les chiffres moyens d'exploitation et, dans ce cas, on a accordé à chaque chaîne le même poids sans tenir compte de son importance. La méthode suivie pour obtenir ces chiffres pondérés ou du "cadre de la série médiane" a été exposée dans la section précédente traitant des "Chaînes de magasins alimentaires".

En suivant cette méthode, on trouve que le pourcentage moyen des dépenses d'exploitation pour les chaînes de pharmacies est de 27.89 p.c. des ventes nettes. On peut comparer ce pourcentage à l'ancien de 26.98 que l'on avait obtenu en comparant les ventes totales avec les dépenses totales des diverses compagnies. Le tableau 22 indique aussi qu'un quart des chaînes de pharmacies avait un pourcentage de frais d'exploitation sur leurs ventes de moins de 24.33 p.c., tandis qu'un autre quart avait un pourcentage de dépenses de plus de 31.54 p.c. des ventes. L'autre moitié des compagnies avait un pourcentage de frais d'exploitation entre ees deux chiffres et aux environs du chiffre moyen de 27.89 p.c. déjà mentionné.

Denrées vendues par les chaînes de pharmacies.—L'analyse partielle des ventes des chaînes de pharmacies est donnée dans le tableau 23. Très peu des plus grosses chaînes ont pu diviser leurs ventes totales d'après le plan des questionnaires du recensement, mais, autant que possible, une répartition même incomplète a été fournie. Vu les données incomplètes reçues de ces chaînes de pharmacies, les pourcentages établis pour les divers artieles ne doivent être considérés qu'approximativement exacts. Les ventes de drogues et produits pharmaceutiques sont fixées à 47·42 p.c. des ventes totales des chaînes de pharmacies, et ce groupe est analysé davantage afin d'indiquer les proportions attribuables aux prescriptions, aux drogues, aux remèdes et mixtures brevetés, aux articles pharmaceutiques ou en caoutchouc divers. Viennent ensuite les articles de toilette et les préparations; ce groupe forme 29·55 p.c. du total, tandis que les recettes provenant de la vente de repas, y compris les ventes de crème glacée et de liqueurs douces, représentent 9·57 p.e. de toutes les ventes des chaînes de pharmacies.

Since each item in this table was obtained independently, the figures in any one column cannot be related to each other. Nor can the individual expense items be added to obtain the total expense ratios shown. For explanations on the method of obtaining these figures, see introduction.

Comme chaque item de ce tableau a été obteau indépendamment, les chiffres d'une colonne n'ont aucun rapport avec de l'autre. Ainsi, il est impossible d'additionner les item individuels de dépenses pour obtenir le total montré. Pour explication de la méthode pur laquelle ces chiffres sont établis voir l'introduction.

PART IV-VARIETY-STORE CHAINS

Introduction.—The modern variety store is a development of the chain store system. During 1930 there were 15 different variety-store chain companies in Canada and these operated 327 stores with total sales of \$39,383,379. Total sales of all variety stores during the same period were \$14,212,200, of which the chain stores transacted 89.08 per cent.

In addition to the popular 5-and-10, and to-a-dollar stores, there have been included under the classification "variety-store chains" a number of organizations dealing in higher-priced merchandise and occupying an intermediate position between the typical variety store on the one hand and the regular department store on the other. Variety stores are, however, characterized by a number of features not common to the department store. Absence of delivery service, operation on a purely cush basis, the great variety of merchandise carried, and low unit prices are characteristic of variety stores. Prominent location of establishment, display of a great variety of merchandise both in windows and on counters, together with low costs, are counted on as means of sales promotion rather than newspaper advertising or strong sales effort on the part of store employees.

Growth of Variety-Store Chains—Of the total number of units operating during 1930, and whose ages could be determined, 31 or 9.54 per cent were opened during that year. During the interval, 1926 to 1929, 152 stores or 46.77 per cent of the total number were opened while 142 stores or 43.69 per cent were in operation prior to 1926. In Table 25 (a) these units of variety-store chains are classified both by provinces and by date of present ownership while in Table 25 (b) the same units are classified by date of present ownership and size of chain.

Distribution of Stores and Sales by Provinces and by Size of Locality.—Of the 327 units of variety-store chains which were operating in 1930, 152 were in Ontario and 101 were in Quebec. There were 21 units in British Columbia, 29 in the Prairie Provinces and 24 in the Maritime Provinces. Variety-store chain sales in Ontario amounted to \$18,408,209 or 46.7 per cent of the total sales of all variety-store chains while sales in Quebec were \$9,949,489 or about 25 per cent of the total.

When classified according to size of locality it is found that 116 of the 327 stores were located in places of more than 100,000 population while only one store was located in places of less than 1,000 population. Of the total value of sales made by these chains, 45-43 per cent may be attributed to places of more than 100,000 population, 20-47 per cent to places of from 30,000 to 100,000, 23-98 per cent to places of from 10,000 to 30,000 and approximately 10 per cent to places of less than 10,000.

Operating Expenses.—In addition to the amounts paid in salaries and wages and rental costs, each firm was asked to report other operating expenses. Other operating expenses include taxes, insurance, maintenance, delivery from stores, stationery and supplies, light, heat, power, interest horrowed for current business operations, and any other operating expense. The cost of goods purchased for resale was, of course, excluded, as well as any items on capital account. Chain store warchouses were considered as wholesale establishments for this Census and have been included in the wholesale reports. Expenses in connection with these warehouses are, therefore, excluded from this report.

Operating expenses of variety chains are analyzed in Table 27. The chains are elassified, firstly, according to the number of units operated and, secondly, according to the average sales per store. For all variety chains, the total operating expense averaged 24.05 per cent of net sales, of which payroll amounted to 10.61 per cent, and other operating expenses, including rent, amounted to 13.44 per cent. Two hundred and seventy, out of the 327 variety chain units, were operated in leased premises, for which rental cost was 4.76 per cent of sales made in these premises. When classified on the basis of number of stores operated, the lowest expense ratio to sales, 22.15 per cent, was obtained by small chains, each having less than 6 units, and the

highest expense ratio, 25·13 per cent, was obtained by a group of 6 chains, each having from 6 to 20 stores. When classified on the basis of the average sales per store, 6 chains, each having average sales per store of less than \$50,000, had an operating expense ratio of 22·20 per cent, while the highest expense ratio, 25·58 per cent, was obtained by a group of 5 chains, each having average sales per store of from \$50,000 to \$100,000.

Sales by Commodities.—An analysis of the sales of variety-store chains by commodities showed that the leading lines of merchandise and their proportions of the total sales are as follows:—

Commodity	Per cent
Women's apparel	15.69
Dry goods and notions	$13\cdot 55$
Home furnishings	10.94
Food products	10.57
Hardware	8.13
Stationery, books and magazines	7.60
Toilet articles and preparations	$7 \cdot 58$

Sales percentages for other commodities are given in Table 28 and the commodity groups mentioned above are also analyzed in greater detail.

Middle Range Figures.—Middle range figures providing uniformly weighted operating results data have been computed for variety-store chains in a manner similar to that outlined for food stores in the section devoted to that group. The results are shown in Table 29 and it is seen that the total operating expense ratio for variety-store chains is 24·20 per cent of net sales. This compares closely with the 24·05 per cent as found by the weighted method based upon the total operating expenses and total sales of the reporting firms. An examination of the lower and upper limits of the middle range indicates that one-fourth of the firms had a total operating expense ratio of less than 23·20 per cent of sales while another quarter of the firms had an expense ratio of more than 25·70 per cent of sales. The narrow margin between the two limits of the middle range indicates that the operating expense ratios for the various firms were fairly uniform.

PART IV-CHAÎNES DE BAZARS

Introduction.—Le bazar moderne est un développement du système de magasins de chaîne. En 1930, il existait 15 compagnies différentes de chaînes de bazars au Canada; elles exploitaient 327 magasins avec des ventes totales de \$39,383,379. Les ventes totales de tous les bazars durant la même période ont atteint \$44,212,200, dont 89.0 p.c. sont au crédit des bazars de chaîne.

Outre les bazars populaires de 5 et 10 cents, jusqu'à \$1, on a inclus dans cette catégorie de rehaînes de bazars" un certain nombre d'organisations vendant des marchandises plus coûteuses et occupant une position intermédiaire entre le vrai bazar d'un côté et le magasin à rayons ordinaire de l'autre. Les bazars sont, toutefois, caractérisés par un certain nombre d'aspects qu'on ne trouve pas dans le magasin à rayons ordinaire. L'absence du service de livraison, les ventes faites au comptant sculement, la grande variété des marchandises offertes et les bas prix des articles sont les principales caractéristiques des bazars. La proéminence de l'emplacement, l'étalage d'une grande variété d'articles dans les vitrines et sur les comptoirs, des prix très réduits sont les moyens sur lesquels on compte pour promouvoir les ventes plutôt que sur la publicité dans les journaux ou sur les efforts des employés.

Expansion des chaînes de bazars.—Du nombre total d'unités en opération en 1930 dont la date d'établissement a pu être déterminée, 31 ou 9·54 p.c. furent ouvertes durant cette année. De 1926 à 1929, 152 magasins ou 46·77 p.c. du nombre total furent ouverts, tandis que 142 magasins ou 43·69 p.c. existaient avant 1926. Dans le tableau 25 (a), ces unités des chaînes de bazars sont classifiées par provinces et d'après la date d'achat du propriétaire actuel, tandis que dans le tableau 25 (b), les nêmes unités sont classifiées d'après la date d'achat du propriétaire actuel et d'après l'importance de la chaîne.

Distribution des magasins et des ventes par provinces et par grandeur de la localité. Des 327 unités de chaînes de bazars en opération en 1930, 152 étaient dans l'Ontario et 101, dans le Québice. La Colombie Britannique comptait 21 unités, les Provinces des Preiries, 29, et les Provinces Maritimes, 24. Les ventes des chaînes de bazars dans l'Ontario ont atteint \$18,408,209 on 46.7 p.c. des ventes totales de toutes les chaînes de bazars, tandis que les ventes dans le Québice ont été de \$9,949,489 ou environ 25 p.c. du total.

Si l'on classifie des unités d'après la population des localités, on voit que 116 des 327 magasins sont situés dans des villes de plus de 100,000 habitants, tandis qu'un seul magasin est situé dans une localité de meins de 1,000 habitants. Des ventes totales de ces chaînes, 45.43 p.c. est attribuable aux villes de plus de 100,000 habitants, 20.47 p.c. aux villes de 30,000 à 100,000 habitants, 23.98 p.c. aux villes de 10,000 à 30,000 et environ 10 p.c. aux localités de moins de 10,000 habitants.

Frais d'exploitation.—Outre les sommes payées en salaires et gages et en loyers, chaque compagnie a été priée de faire rapport sur ses autres dépenses d'exploitation. Ces dernières inchient les taxes, l'assurance, l'entretien, la livraison, la papeterie et les accessoires, l'éclairage, le chauffage, l'énergie, l'intérêt sur l'argent emprunté pour les opérations courantes et toutes autres dépenses d'exploitation. Le coût des marchandises achetées pour la vente, naturellement, est exclus comme aussi les item au compte du capital. Les entrepôts des chaînes ont été considérés comme établissements de gros pour ce recensement et ont été inclus dans les rapports du commerce de gros. Les dépenses de ces entrepôts sont, par conséquent, exclues.

Les frais d'exploitation des chaînes de bazars sont analysés dans le tableau 27. Les chaînes sont classifiées, d'abord, d'après le nombre d'unités exploitées et, ensuite, d'après les ventes moyennes par magasin. Pour toutes les chaînes de bazars, les dépenses totales moyennes d'exploitation absorbent 24.05 p.c. des ventes nettes, le bordereau de paye représentant 10.61 p.c. et les autres dépenses, loyers compris, 13.44 p.c. Des 327 unités des chaînes de bazars, 270, étaient exploitées dans des locaux loués, les loyers représentant 4.76 p.c. des ventes nettes dans ces locaux. Si l'on classifie ces chaînes d'après le nombre de magasins exploités, le pourcentage

le moins élevé des dépenses, comparativement aux ventes, est de 22·15 p.c. et est celui des petites chaînes comptant chacune moins de 6 unités; et le pourcentage le plus élevé de dépenses, soit 25·13 p.c., est celui d'un groupe de 6 chaînes comptant chacune de 6 à 20 magasins. Si le classement se fait d'après les ventes moyennes par magasin, 6 chaînes ayant chacune une moyenne de ventes par magasin de moins de \$50,000, ont un pourcentage de frais d'exploitation de 22·20 p.c., tandis que le pourcentage le plus élevé de dépenses, 25·58 p.c., est celui d'un groupe de 5 chaînes dont les ventes moyennes de chacune par magasin est de \$50,000 à \$100,000.

Ventes par catégories de marchandises.—Une analyse des ventes des chaînes de bazars par lignes de marchandises indique que les principales lignes et leurs proportions sur les ventes totales sont comme suit:—

Ligne de marchandises	Pour- centage
Vêtements de femmes	15.69
Lingerie et articles de fantaisie	13.55
Fournitures de maison	10.94
Denrées alimentaires	10.57
Quincaillerie	8.13
Papeterie, livres et magazines	
Articles et préparations de toilette	7.58

Les pourcentages des ventes d'autres articles sont donnés dans le tableau 28 et les groupes de lignes de marchandises mentionnées sont aussi analysées plus en détail.

Cadre de la série médiane.—Les chiffres du groupe central donnant des résultats uniformément pondérés sur les opérations totales ont été établis, pour les chaînes de bazars, d'une façon similaire à celle que l'on a expliquée pour les magasins de denrées alimentaires dans la section traitant de ce groupe. Les résultats sont indiqués dans le tableau 29 où l'on voit que le pourcentage des dépenses totales d'exploitation pour les chaînes de bazars est de 24·20 p.c. des ventes nettes. Ce pourcentage se rapproche beaucoup de celui que l'on a établi, 24·05 p.c., avec la méthode pondérée basée sur les dépenses totales d'exploitation et les ventes totales des compagnies qui ont fait rapport. Un examen des limites inférieure et supérieure du groupe central indique que le quart des compagnies avait un pourcentage de dépenses totales d'exploitation de moins de 23·20 p.c. des ventes, tandis que l'autre quart des compagnies avait un pourcentage de dépenses de plus de 25·70 p.c. des ventes. La marge étroite entre ces deux limites du groupe central indique que les pourcentages des frais d'exploitation des diverses compagnies ont été à peu près uniformes.

:Number of employees per \$100,000 sales—Nombre d'employés par \$100,000 de ventes.		4 · 1 0	16.10	18-80

Since each item in this table was obtained independently, the figures in any one column cannot be related to each other. Nor can the individual expense items be added to obtain the total expense ratios shown. For explanations on the method of obtaining these figures, see introduction.

Comme chaque item de ce tableau a été obtenu indépendamment, les chiffres d'unc colonne n'ont aucun rapport avec ceux de l'autre. Ainsi, il est impossible d'additionner les item individuels de dépenses pour obtenir le total montré. Pour explication de la méthode par laquelle ces chiffres sont établis voir l'introduction.

PART V—FILLING STATION CHAINS

Introduction.—This section presents a summary of the operations of filling station chains in Canada during 1930. A filling station has been considered part of a chain only when it was actually controlled and operated by a central organization, the employees being employed on a salary or commission basis. Many of the gasoline companies in Canada owned stations in 1930 which were rented to individual operators who carried on their own business. These have been designated as "leased stations" and have been treated as independent establishments and not as units of chain organizations.

There were 28 filling station chains in Canada in 1930 and these operated 743 stations with total sales of \$14,875,440. Total sales of all filling stations for the same year amounted to \$66,449,300 so that the chains accounted for 22.39 per cent of the total business.

Growth of Filling Station Chains.—Of the 717 units of filling station chains whose ages could be determined, 177, or almost 25 per cent, were opened in 1930; 340, or 47.4 per cent of the total number, were opened in the four preceding years—from 1926 to 1929 inclusive—while 200 stations, or about 28 per cent of the total number, were in operation prior to 1926.

Distribution of Units and Sales by Provinces and Size of Locality.—From Table 32 it is seen that 484 of the 743 filling station chain units were located in Ontario and 145 were in Quebec. There were 66 units in the Prairie Provinces, 40 in the Maritime Provinces, and 8 in British Columbia. It must be borne in mind, of course, that these numbers refer only to stations actually operated by the chains themselves and do not include stations operated on a leased basis. This factor accounts for the small number of chain units reported in some provinces. The distribution of sales by provinces is also shown in Table 32, and the sales for each province and for the Dominion are analyzed further by size of city. Of the total sales of \$14,875,440 made by all chains, sales in cities of 100,000 population or over amounted to \$9,814,433, or 62.6 percent. There were only two provinces, Ontario and Nova Scotia, in which filling station chains operated units in localities of less than 1,000 population. The 31 filling stations operated in these districts had total sales of \$357,590, or only 2.4 per cent of the total chain sales for the Dominion.

Station Operating Expenses.—The operating expenses reported include only those applicable to the retail stations themselves, and do not include the cost of transportation of goods to the stations. Head office salaries and other expenses are also omitted as these have been attributed entirely to the wholesale activities of the companies. Considerable correspondence was necessary to remove wide discrepancies in the expense items reported by different firms, but every effort was made to secure the most accurate data possible. Due to the lack of uniformity in accounting practices and to the difficulty in some cases in segregating retail operating expenses from the wholesale figures, these operating expense ratios should be considered only as indicative of the costs of operation of filling station chains.

For all filling station chains as a whole, total operating expenses amounted to 25·11 per cent of net sales. Of this, payroll was 15·53 per cent of sales, and other station operating expense, including rent, was 9·58 per cent. Rent paid by the chains for leased premises amounted to 4·65 per cent of sales made in these premises.

When classified according to type of operation, it is seen that the lowest operating expense ratio, 16.65 per cent of net sales, was obtained by 9 local chains operating 61 stations and having total net sales during 1930 of \$1,617,945. These chains were purely retail organizations and operated no wholesale outlets. Most of these local chains were independent proprietorships, and the estimated value of proprietors' salaries amounted to an additional 0.86 per cent of sales, making a total operating expense of 17.51 per cent. The operating expense ratio of the local chains has been decreased considerably by the inclusion of one chain reporting expense items somewhat below the average of the others. Had this chain been omitted from the table, the total

operating expense for the group (omitting proprietors' salaries) would have been $18\cdot02$ per cent instead of $16\cdot65$, as shown in the table. Payroll cost would have been $8\cdot84$ per cent and other operating expenses, including rent, $9\cdot18$ per cent. Rent in leased premises would have been $4\cdot55$ per cent of net sales in such premises instead of $3\cdot66$ per cent, as shown. Operating expenses for provincial, sectional and national chains were much greater than for local chains, the percentages being $27\cdot46$, $26\cdot63$ and $25\cdot38$ respectively. The higher payroll costs were, in large measure, responsible for the higher expense ratios.

When classified according to average sales per station, it is seen that chains having average sales per station of over \$30,000 operated on an expense ratio of 19·21 per cent of net sales, as compared with 35·34 per cent for those chains whose station sales averaged less than \$20,000. In many cases, chains opened a large proportion of their units during the year covered by the Census reports. In determining the average sales per unit for each chain, allowance was made for this factor by attributing to each organization the average number of units in operation during the year.

Sales by Commodity Classes.—Of the total sales made by filling station chains, $83 \cdot 29$ per cent represented the sale of gasoline and $13 \cdot 49$ per cent the sale of oil. Parts and accessories and tires and tubes amounted to only $1 \cdot 18$ per cent, and receipts from services amounted to $1 \cdot 32$ per cent of total sales. A breakdown by commodity sales is shown in Table 34.

Middle Range Figures.—Middle range figures were computed for filling station chains in the same manner as that outlined in preceding sections. The uniformly weighted operating expense ratio for filling station chains is found to be 20.70 per cent of net sales as compared with 25.11 per cent as derived from the weighted method. Lower and upper limit figures are 18.20 per cent and 24.80 per cent respectively.

PARTIE V.—CHAÎNES DE STATIONS D'ESSENCE

Introduction.—Cette section présente un sommaire des opérations des chaînes de stations d'essence au Canada en 1930. Une station d'essence n'a été jugée faire partie d'une chaîne que dans le cas où elle était vraiment sous le contrôle d'une organisation centrale et exploitée par elle, les employés étant à salaire ou à commission. Plusieurs des compagnies d'essence au Canada possédaient en 1930 des stations qu'elles louaient à des exploitants particuliers qui conduisaient leur propre commerce. Ces stations ont été désignées sous le nom de "stations louées" et ont été traitées comme établissements indépendants et non comme unités de chaîne.

Il existait 28 chaînes de stations d'essence au Canada en 1930; elles exploitaient 743 stations et leurs ventes totales se sont élevées à \$14,875,440. Les ventes totales de toutes les stations d'essence durant la même année ont atteint \$66,449,300, de sorte que les chaînes ont absorbé 22:39 p.c. du commerce total.

Expansion des chaînes de stations d'essence.—Des 717 unités des chaînes de stations d'essence dont la date d'établissement a pu être déterminée, 177, ou presque 25 p.c. ont été établies en 1930: 340, ou 47·4 p.c. du nombre total, ont été établies durant les quatre années précédentes, de 1926 à 1929 inclusivement, tandis que 200 stations, ou environ 28 p.c. du nombre total, existaient avant 1926.

Distribution des unités et des ventes par provinces et par grandeur de la localité.— Le tableau 32 montre que 484 unités des chaînes de stations d'essence sur 743 étaient situées dans la province d'Ontario et 145 dans le Québec. Les Provinces des Prairies en comptaient 66; les Provinces Maritimes, 40; et la Colombie Britannique, 8. Il ne faut pas oublier, naturellement, que ces chiffres ne se rapportent qu'aux stations réellement exploitées par les chaînes elles-mêmes, et n'incluent pas les stations louées. Ce facteur est responsable du petit nombre d'unités de chaîne dans certaines provinces. La distribution des ventes par provinces est aussi indiquée dans le tableau 32, et les ventes pour chaque province et pour le Dominion y sont aussi analysées d'après la population des villes. Sur des ventes totales de \$14,875,440 attribuables à toutes les chaînes, les ventes dans les villes de 100,000 habitants ou plus ont absorbé \$9,314,433, ou 62 · 6 p.e. Dans deux provinces seulement, l'Ontario et la Nouvelle-Ecosse, les chaînes ont maintenu des stations dans des localités de moins de 1,000 habitants. Les 31 stations d'essence exploitées chaînes dans le Dominion.

Frais d'exploitation des stations.—Les frais d'exploitation mentionnés n'incluent que ceux des stations de détail mêmes, et n'incluent pas le coût du transport des marchandises aux stations. Les salaires et autres dépenses du bureau central sont aussi omis car ils ont été crédités entièrement au commerce de gros des compagnies. Une correspondance considérable a été nécessaire pour faire disparaître de grandes différences dans les item de dépenses mentionnés par les différentes compagnies, mais aucun effort n'a été ménagé pour obtenir les chiffres les plus exacts possible. Vu le manque d'uniformité dans la comptabilité et la difficulté dans certains cas de séparer les dépenses d'exploitation du détail de celles du gros, les pourcentages des dépenses d'exploitation ne doivent être considérés que comme indice du coût d'exploitation des chaînes de stations d'essence.

Pour toutes les chaînes de stations d'essence, prises dans leur ensemble, les dépenses totales d'exploitation ont absorbé 25·11 p.c. des ventes nettes. De ce pourcentage, le bordereau de paye représente 15·53 p.c. des ventes et les autres dépenses d'exploitation des stations, loyers compris, 9·58 p.c. Les loyers payés par les chaînes représentent 4·65 p.c. des ventes faites dans ces locaux.

Si le classement est fait d'après le genre d'opérations, on voit que le pourcentage le plus bas des frais d'exploitation, soit 16.65 p.c. des ventes nettes, est celui des 9 chaînes locales exploitant 61 stations avec ventes totales nettes en 1930 de \$1,617,945. Ces chaînes sont simplement des organisations de détail qui ne font aucun eommerce de gros. La plupart de ces chaînes appartiennent à des particuliers, et la valeur estimative des salaires des propriétaires absorbe un pourcentage additionnel de 0.86 p.c. des ventes, ce qui donne un pourcentage total des frais d'exploitation de 17.51 p.c. Le pourcentage des frais d'exploitation des chaînes locales a été diminué considérablement à cause de l'inclusion d'une chaîne dont les item de dépense étaient quelque peu au-dessous de la moyenne des autres. Si l'on avait omis cette chaîne dans le tableau, les dépenses totales d'exploitation pour le groupe (omettant les salaires des propriétaires) auraient été de 18.02 p.c. au lieu de 16.65, comme l'indique le tableau. Le bordereau de paye aurait absorbé 8.84 v.c. et les autres dépenses d'exploitation, loyers compris, 9.18 p.c. Les loyers auraient absorbé 4.55 p.c. des ventes nettes faites dans ces locaux au lieu de 3.66 p.c., comme l'indique le tableau. Les dépenses d'exploitation des chaînes provinciales, sectionelles et nationales ont été beaucoup plus élevées que celles des chaînes locales, les pourcentages étant 27.46, 26.63 et 25.38 respectivement. Le bordereau de paye plus élevé est, dans une large mesure, responsable des pourcentages plus élevés de dépenses.

Si le classement est fait d'après les ventes moyennes par station, on voit que les chaînes ayant des ventes moyennes par station de plus de \$30,000 ont eu un pourcentage de dépenses de 19·21 p.c. des ventes nettes au lieu de 35·34 p.c. pour les chaînes dont les ventes moyennes par station ont été de moins de \$20,000. Dans plusieurs cas, des chaînes ont établi une grande proportion de leurs unités durant l'année que revoient les rapports du recensement. En déterminant les ventes moyennes par unité pour chaque chaîne, on a tenu compte de ce facteur en attribuant à chaque organisation le nombre moyen d'unités en exploitation durant l'année.

Ventes par catégories de marchandises.—Des ventes totales des chaînes de stations d'essence, 83·29 p.c. représente la vente de gazoline et 13·49 p.c., la vente d'huile. Les pièces et accessoires et les pneus et chambres à air ne représentent que 1·18 p.c., et les recettes pour services, 1·32 p.c. des ventes totales. Une répartition des ventes par marchandises est donnée dans le tableau 34.

Cadre de la série médiane.—Les chiffres du groupe central pour les chaînes de stations d'essence ont été calculés de la même façon que celle que l'on a exposée dans les sections précédentes. Le pourcentage des dépenses d'exploitation uniformément pondéré est fixé à 20·70 p.c. des ventes nettes contre 25·11 p.c. que donne la méthode pondérée. Les chiffres des limites inférieure et supérieure sont 18·20 p.c. et 24·80 p.c. respectivement.

Since each item in this table was obtained independently, the figures in any one column cannot be related to each other. Nor can the individual expense items be added to obtain the total expense ratios shown. For explanations on the method of obtaining these figures, see introduction.

Comme chaque item de ce tableau a été obtenu indépendamment, les chiffres d'une colonne n'ont aucun rapport avec cœux de l'autre. Ainsi, il est impossible d'additionner les item individuels de dépenses pour obtenir le total montré. Pour explication de la méthode par laquelle ces chiffres sont établis voir l'introduction.

HOTEL OPERATIONS IN CANADA, 1930

Introduction.—This section presents the results of the census of hotels which was taken in connection with the Census of Merchandising and Service Establishments, 1931. As the enumeration and canvass of hotels were conducted in the same manner as for other branches of the Census of Merchandising and Service Establishments, 1931, it is unnecessary to describe the procedure here. A full description of the methods followed will be found in Volume X.

Scope of the Hotel Census.—This census was confined to hotels and did not include apartment houses, boarding houses, clubs, Y.M.C.A.'s, Y.W.C.A.'s, tourist camps, etc. The census covered all hotels in operation in Canada during the year 1930. Separate statistics are given for hotels operating the entire year and for those which operate only part of the year. Included in the statistics for hotels are figures for restaurants or other eating places located in hotels and operated under hotel management. Information on restaurants not in hotels or located in hotels but not under hotel management will be found in the reports on retail merchandise establishments contained in Volume X.

Explanation of Terms

Period of Operation.—The schedule for hotels had the following question regarding period of operation: "How many months of the year is the hotel open?" On the basis of replies to this query hotels were classified as operating the entire year or part of the year. Practically all of the hotels operating part of the year are of the resort type and are generally located outside of cities. The statistics by cities are thus confined to hotels operating the entire year.

Plan of Operation.—All hotels have been classified as to plan of operation, viz., European, American and mixed (European and American), and data are given for each classification. Hotels classified as European plan are those which make separate charges for room and meals. American plan hotels are those having a fixed combined rate for room and meals. Mixed plan hotels are those operating partly on the European plan and partly on the American plan.

Receipts.—While the questionnaire requested that receipts from rental of rooms and sale of meals be shown separately, American and mixed plan hotels in many cases were unable to make the required segregation and so reported these receipts in one amount. Receipts from meals for hotels which did not report separate figures have been estimated on the basis of the figures reported by those hotels which were able to make the segregation.

Employees.—The total number of paid employees and the number of dining room, lunch room and kitchen employees were reported for the months of January, April, July, October and December in 1930. The number of employees as of the date on which the report was made, classified according to sex, was also shown. The average number of employees for the five months for hotels operating the entire year is shown, and the sex ratio reported at the time the questionnaire was prepared was applied to this average to obtain the classification by sex. As hotels of the resort type, operating only part of the year, employ practically no help during the off seasons, the average number of employees for such hotels computed in a manner similar to that used for hotels operating the entire year would not be significant. The number of employees for the months of January, April, July, October and December is shown, and the number of dining room, lunch room and kitchen employees reported for the month of July is also given.

Salaries and Wages Paid.—This report shows the total amount paid in salaries and wages during the year 1930 for all paid employees, and separately for dining and lunch room and kitchen employees.

Proprietors and Firm Members.—Proprietors and firm members receiving a stated salary were requested to report the amounts so received during the year. Figures are based on the replies to this query, but it is realized that the data contain some errors and omissions due to various interpretations of the question.

1237

Analysis of Results

The total number of hotels in operation in Canada during the year 1930 was 4,958, of which 4,176 were in operation during the entire year and 782 operated only part of the year (generally in the summer months). The total receipts for both classes of hotels amounted to \$90,518,970, of which \$83,732,700 were reported by hotels operating the entire year and \$6,786,270 for seasonal hotels. The guest rooms in hotels of both classes numbered 129,462. The average number of rooms per hotel was 25.78 for continuous hotels and 27.86 for scasonal hotels.

The highest number of employees in both classes of hotels was reported for the month of July, when there were 36,491 persons engaged. Many of the 8,113 employees reported in this month for seasonal hotels have a relatively brief period of employment. The total amount paid in salaries and wages to employees in continuous and seasonal hotels was \$20,400,663 during the year 1930.

The supplying of meals and refreshments is an important branch of hotel activities in general, although there are establishments which do not operate dining rooms themselves or which lease restaurant space to concerns not under the hotel management. As has already been pointed out in this report, the statistics on dining room operations relate only to eating places in the hotel and under its management. The seating capacity of dining rooms in both continuous and seasonal hotels was 153,683. The term "dining room" is used in the hotel report to cover grill rooms, restaurants, coffee rooms, etc., as well as dining rooms. The total receipts from the sale of meals are estimated at \$28,124,208.

In some provinces during the year 1930 hotels were licensed to sell beer and wine. The total receipts from this source in both continuous and seasonal hotels amounted to \$23,942,457. The service facilities operated by hotels also provided a substantial amount of revenue. The chief facilities maintained were valet service, tobacco stands, news stands, and barber shops, but a number of other activities was also reported. The total receipts from these subsidiary activities were \$8,298,587.

Hotel operations require a large amount of capital, the greater part of which is represented by investment in land, buildings and furnishings. The total amount of capital invested in hotels in Canada in 1930 was \$252,527,500.

Hotels Operating the Entire Year

The total receipts reported by the 4,176 hotels in operation during the entire year were \$83,732,700, of which \$49,600,149 were secured by 1,306 European plan hotels. The province of Quebec, with 1,172 hotels of all types and receipts of \$24,344,207, led both in number of establishments and volume of business, while Ontario, with 1,044 hotels and receipts of \$21,579,099. was second. A comparison of hotel operations by cities shows that Vancouver, with 95 hotels, had the greatest number but was third in amount of business done, with hotel receipts of \$6,084,-364. Montreal was second in number, with 71 hotels, but was first in amount of business, with hotel receipts of \$9,460,453.

Receipts from the sale of meals, as reported by European plan hotels and estimated in the case of those American and mixed plan hotels which did not give separate figures, amounted to \$25,045,040, thus constituting 29.9 per cent of the entire revenue of all hotels which operated throughout the whole year. The value of beer sold in the four provinces in which its sale was permitted, and of wine in the province of Quebec, was \$23,607,817, or 28.2 per cent of the total revenue. Receipts from other sources—such as tobacco counters, news stands, etc.—which amounted to \$7,459,018, were 8.9 per cent of the total, the remaining 33.0 per cent, or \$27,620,-825, being derived from rental of rooms.

The average number of employees for the months of January, April, July, October and December was 26,833, of which 14,417 are taken as male employees and 12,416 as female employees. The total amount paid for the year to these employees was \$18,821,514. Dining room, lunch room and kitchen employees averaged 11,046, of which 4,845 are taken as male and 6,201 as female, and the total amount paid these employees was \$6,628,683. (The value of board and lodging furnished to employees was not reported.)

CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS, 1931 1239

There were 580 proprietors and firm members who reported receiving a stated salary and their incomes from this source totalled \$853,887.

The total number of guest rooms in hotels operating the full year was 107,674 and of bathrooms 25,586, while the total seating capacity of dining rooms was 114,795.

The total amount of capital employed was \$214,183,300. European plan hotels, which numbered 1,306 or 31 per cent of all hotels in operation the entire year, had capital employed amounting to \$147,091,200, or 68.68 per cent of the total.

Hotels Operating Part of the Year

Hotels in operation only part of the year numbered 782, with total receipts of \$6,786,270. Of this number, 56 operating on the European plan reported receipts of \$790,830. Ontario, with 360 seasonal hotels reporting receipts of \$2,551,392, led both in number of establishments and volume of business; Quebec, with 240 hotels and receipts of \$1,617,310, was second.

As most of the sensonal hotels are operated on the American and mixed plans, separate figures for receipts from meals were not reported in all cases. However, on the basis of information submitted by those hotels which were able to show this amount separately, it is estimated that receipts from this source amounted to \$3,079,168 or 45.4 per cent of the total revenue. Beer and wine sales, which were \$334,640, were 4.9 per cent of the total and receipts from other sources—such as tobacco counters, news stands, etc.—which amounted to \$839,569, accounted for 12.4 per cent, the remaining 37.3 per cent being made up of receipts of \$2,532,893 from

The number of employees reported for the month of July was 8,113, of which 4,437 were employed in the dining room, lunch room and kitchen. The total amount paid in salaries and wages to employees was \$1,579,149, of which \$632,674 were paid to dining room, lunch room and kitchen employees. This amount covers only the period of employment and does not include any estimate of the value of board and lodging furnished employees.

Only 58 proprietors and firm members in seasonal hotels reported that they received a stated salary. The amounts so received totalled \$52,037.

The total number of guest rooms reported by the 782 seasonal hotels was 21,788, the number of bathrooms 4,757, and the total seating capacity of dining rooms 38,888.

The total amount of capital reported by hotels in operation part of the year was \$38,344,200.

OPÉRATIONS DES HÔTELS AU CANADA, 1930

Introduction.—Cette section donne les résultats du recensement des hôtels pris lors du Recensement des Etablissements de Commerce et de Service, 1931. Comme l'énumération et le recensement des hôtels se sont faits de la même façon que pour les autres branches du Recensement des Etablissements de Commerce et de Service, 1931, il n'est pas nécessaire de décrire la procédure ici. On trouvera une description complète des méthodes suivies dans le Volume X.

Etendue du recensement des hôtels.—Ce recensement s'est limité aux hôtels et n'a pas inchis les maisons de rapport, les pensions, les clubs, les établissements de la Y.M.C.A. et de la Y.W.C.A. les campements de touristes, etc. Le recensement couvre tous les hôtels en opération au Canada durant l'année 1930. Des statistiques séparées sont données pour les hôtels ouverts toute l'année et pour ceux qui ne sont ouverts qu'une partie de l'année. Inclus dans les statistiques des hôtels sont les chiffres concernant les restaurants et autres salles à manger situés dans les hôtels et exploités sous leur direction. Des renseignements sur les restaurants situés en dehors des hôtels, ou dans les hôtels mais non sous leur direction, sont donnés dans les rapports sur les établissements de commerce de détail que l'on trouvera dans le Volume X.

Explication des termes

Période d'opération.—La formule pour les hôtels contenait la question suivante concernant la période d'opération: "Pendant combien de mois de l'année l'hôtel est-il ouvert?" l'in se basant sur les réponses à cette question, les hôtels ont été divisés en deux catégories: hôtels ouverts toute l'année et hôtels ouverts durant une partie de l'année seulement. Presque tous les hôtels ouverts durant une partie de l'année seulement sont du type "de villégiature" et sont généralement situés en dehors des villes. Les statistiques par villes se limitent donc aux hôtels ouverts toute l'année.

Plan d'opération.—Tous les hôtels ont été classifiés d'après les plans d'opération, savoir, enrepaien, américain et mixte (européen et américain), et les chiffres sont donnés pour chaque du stituation. Les hôtels suivant le plan européen sont ceux qui chargent un prix séparé pour la chambre et les repas. Les hôtels qui suivent le plan américain sont ceux qui ont un prix combiné paur la chambre et les repas. Les hôtels qui suivent le plan mixte sont ceux qui suivent les deux plans, européen et américain.

Recettes.—Bien que le questionnaire demandât de séparer les recettes provenant du loyer des chambres de celles de la vente de repas, les hôtels suivant le plan américain et le plan mixte n'ent pur dans bien des cas, séparer les deux et ont inscrit ces recettes en une somme globale. Les recettes pour repas des hôtels qui n'ont pas fourni de chiffres séparés ont été divisées en prement comme base les chiffres des hôtels qui avaient séparé les deux comptes.

Employés.—Le nombre total d'employés payés et le nombre des employés des salles à manger, des comptoirs pour goûters et des cuisines ont été donnés pour les mois de janvier, avril, juillet, octobre et décembre de 1930. On a également donné le nombre des employés à la date du rapport; ils sont classifiés d'après le sexe. Le nombre moyen d'employés pour les cinq mois pour les hôtels ouverts toute l'année est également indiqué. La proportion de chaque sexe à l'époque où le questionnaire fut rempli a été appliquée à cette moyenne pour obtenir la classification par sexe. Comme les hôtels de villégiature ne sont ouverts qu'une partie de l'année et n'ont à peu près pas d'employés en dehors de la saison, le nombre moyen des employés de ces hôtels, établi d'une façon similaire à celle que l'on a employée pour les hôtels ouverts toute l'année, n'aurait aucune signification. Le nombre d'employés pour les mois de janvier, avril, juillet, octobre et décembre est indiqué, et le nombre d'employés de salles à manger, de salles pour goûters et de cuisines est aussi donné pour le mois de juillet.

Salaires et gages payés.—Ce rapport indique la somme totale payée en salaires et gages durant l'année 1930 à tous les employés payés et, séparément, aux employés des salles à manger, des salles pour goûters et des cuisines.

1243

Propriétaires et membres de firme.—Les propriétaires et membres de firme recevant un salaire fixe ont été priés de mentionner les montants reçus durant l'année. Les chiffres sont basés sur les réponses à cette question, mais on peut voir que les données contiennent maintes erreurs ou omissions dues à des interprétations diverses de la question.

Analyse des résultats

Le nombre total d'hôtels en opération au Canada durant l'année 1930 était de 4,958 dont 4,176 ont été en opération durant toute l'année et 782 durant une partie de l'année seulement (généralement durant les mois d'été). Les recettes totales des deux catégories d'hôtels ont atteint \$90,518,970 dont \$83,732,700 sont au crédit des hôtels ouverts toute l'année et \$6,786,270 au crédit des hôtels saisonniers. Le nombre de chambres de voyageurs dans les hôtels des deux catégories était de 129,462. Le nombre moyen de chambres par hôtel était de 25.78 pour les hôtels ouverts toute l'année et de 27.86 pour les hôtels saisonniers.

Le nombre le plus élevé d'employés dans les deux catégories d'hôtels a été celui du mois de juillet alors qu'il comprenait 36,491 personnes. Parmi les 8,113 employés inscrits pour ce mois dans les hôtels saisonniers un grand nombre ne travaillent que durant une période relativement courte. La somme totale payéc en salaires et en gages aux employés des hôtels des deux catégories a atteint \$20,400,663 en 1930.

Les repas et les rafraîchissements forment une branche importante de services généraux des hôtels, bien que certains de ces derniers n'exploitent pas eux-mêmes de salles à manger, ou ils louent un espace à des firmes ou personnes qui maintiennent un restaurant non soumis à la direction de l'hôtel. Comme on l'a déjà fait remarquer, les statistiques de ce rapport sur les opérations des salles à manger ne visent que les salles à manger de l'hôtel soumises à la direction de ce dernier. La capacité en sièges des salles à manger dans les deux catégories d'hôtel était de 153,683. Le terme "salle à manger" est employé dans le rapport sur les hôtels pour désigner les rôtisseries, restaurants, cafétérias, etc. aussi bien que les salles à manger. Les recettes totales de la vente de repas sont estimées à \$28,124,208.

Dans quelques provinces, durant l'année 1930, les hôtels ont été autorisés à vendre de la bière et du vin. Les recettes totales de cette source, dans les deux catégories d'hôtels ont atteint \$23,942,457. Les services offerts par les hôtels ont aussi rapporté une somme considérable de revenu. Les principaux services comprenaient le nettoyage et le pressage, la vente des tabacs et des journaux et les salons de barbier, mais d'autres services étaient aussi inclus. Les recettes totales de ces services supplémentaires ont atteint \$8,298,587.

Le maintien des hôtels requiert une somme considérable de capital dont la plus grande partie représente les terrains, les édifices et le mobilier. La somme totale de capital placé dans les hôtels au Canada en 1930 s'élevait à \$252,527,500.

Hôtels ouverts toute l'année

Les recettes totales des 4,176 hôtels ouverts toute l'année ont été de \$83,732,700, dont \$49,600,149 ont été absorbés par les 1,306 hôtels suivant le plan européen. La province de Québec, avec 1,172 hôtels de tous genres et avec des recettes de \$24,344,207 tenait le premier rang quant au nombre d'établissements et au volume d'affaires, tandis que l'Ontario, avec 1,044 hôtels et des recettes de \$21,579,099, occupait le deuxième rang. Une comparaison des opérations des hôtels par villes indique que Vancouver, avec 95 hôtels occupait le premier rang quant au nombre total mais le troisième, quant au chiffre d'affaires; les recettes de ses hôtels ont été de \$6,084,364. Montréal avec 71 hôtels occupait le second rang, mais venait en tête quant au chiffre d'affaires; les recettes de ses hôtels atteignant \$9,460,453.

Les recettes provenant de la vente de repas, d'après les rapports des hôtels suivant le plan européen, et d'après une estimation dans le cas des hôtels suivant le plan américain ou le plan mixte, lesquels n'ont pas fourni de chiffres séparés, se sont élevées à \$25,045,040, ce qui représente 29·9 p.c. du revenu total de tous les hôtels en opération durant toute l'année. La valeur de la bière vendue dans les quatre provinces où la vente en est permise, et du vin dans la province de Québec, a atteint \$23,607,817, soit 28·2 p.c. du revenu total. Les recettes d'autres sourees—comme la vente des tabacs et des journaux, etc.—se sont élevées à \$7,459,018 ou à 8·9 p.c. du total, le reste, soit 33·0 p.c. ou \$27,620,825 provenant du loyer des chambres.

1245 Le nombre moyen des employés pour les mois de janvier, avril, juillet, octobre et décembre a été de 26,833, dont 14,417 étaient des hommes et 12,416, des femmes. La somme totale payée à ces employés pour l'année a été de \$18,821,514. Les employés des salles à manger, des salles pour goûters et des cuisines ont été, en moyenne, de 11,046, dont 4,845 étaient des hommes et 6,201, des femmes; la somme totale payée à ces employés a été de \$6,628,683. (La valeur de la pension et du logement fournis aux employés n'a pas été mentionnée.)

D'après les rapports, 580 propriétaires et membres de firme ont reçu un salaire fixe et leur revenu de cette source forme un total de \$853,887.

Le nombre total de chambres de voyageurs dans les hôtels ouverts toute l'année a été de 107,674 ct celui des salles de bain, de 25,586, tandis que la capacité totale en couverts dans les

La somme totale de capital placé dans les hôtels était de \$214,183,300. Les hôtels suivant le plan curopécn, au nombre de 1,306, soit 31 p.c. de tous les hôtels ouverts toute l'année, avaient un capital de \$147,091,200, soit 68-68 p.c. du total.

Hôtels ouverts durant une partie de l'année seulement

Les hôtels ouverts durant une partie de l'année seulement étaient au nombre de 782 avec des recettes totales de \$6,783,270. De ce nombre, 56 suivant le plan européen ont fixé leurs recettes à \$790,830. La province d'Ontario, avec 360 hôtels saisonniers dont les recettes se sont élevées à \$2,551,392 occupait le premier rang quant au nombre d'établissements et au volume d'affaires; le Québec, avec 240 hôtels et des recettes de \$1,617,310 occupait le deuxième rang.

('omme la plupart des hôtels saisonniers suivaient le plan américain et le plan mixte, des chiffres séparés sur les recettes provenant des repas n'ont pas été fournis dans tous les cas. Toutefois, en se basant sur les renseignements des hôtels qui ont pu donner des chiffres séparés, il est estimé que les recettes de cette source ont atteint \$3,079,168 ou 45.4 p.c. du revenu total. La vente de la bière et du vin, rapportant une somme de \$334,640 représente 4·9 p.c. du total, et les recettes provenant d'autres sources-ventes de tabacs et de journaux, etc.-qui ont atteint \$839,509 représentaient 12 · 4 p.c. du total ; le reste, soit 37 · 3 p.c. représentait le loyer des chambres, soit une somme de \$2,532,893.

Le nombre d'employés inscrits pour le mois de juillet a été de 8,113, dont 4,437 étaient employés dans les salles à manger, les salles pour goûters et les cuisincs. La somme totale payée en salaires et gages à ces employés a été de \$1,579,149, dont \$632,674, aux employés de salles à manger, salles pour goûters et cuisines. Cette somme n'est que pour la période d'emploi et n'inclut rien pour la pension et le logement fournis aux employés.

Pour les hôtels saisonniers, 58 propriétaires et membres de firme seulement ont déclaré recevoir un salaire fixe. Le total ainsi reçu est de \$52,037.

Le nombre total de chambres de voyageurs dans les 782 hôtels saisonniers était 21,788, le nombre de salles de bain, 4,757 et la capacité totale en couverts, de 38,888.

La somme totale de capital déclarée par les hôtels ouverts durant une partie de l'année seulement est de \$38,344,200.

SECTION V

DISTRIBUTION OF SALES OF MANUFACTURING PLANTS, CANADA, 1930

DISTRIBUTION OF SALES OF MANUFACTURING PLANTS, 1930

Introduction.—This section presents the results of an initial study of the channels of distribution utilized by manufacturing plants in Canada during the year 1930. The statistics presented in this report relate only to the first stage of distribution from the factory and do not necessarily indicate the ultimate destination of the products. This report covers only the sales of manufacturers. Information in regard to the sales of wholesale or retail merchandising establishments will be found in the reports for these branches of trade.

Scope of the Inquiry.—In connection with the Census of Merchandising and Service Establishments, 1931, questionnaires on which the distribution of sales was to be shown were mailed to all manufacturers included in the Census of Industry. While every manufacturing firm in Canada did not find it possible to furnish information on the distribution of its sales, a sufficiently large number of manufacturers reported in each industry to provide representative figures. For small industries reports were received from all manufacturing establishments.

Nature of the Inquiry.—The questionnaire used in the inquiry contained the following form for distribution of sales:—

SALES:-

Report below, in the proper spaces, the value at the factory of all goods of your own manufacture sold by your firm during the year covered by this report to each of the different kinds of customers indicated. Report only actual sales.

Do not report repair or service operations or value of labour performed on material furnished to others.

Domestic Sales (Sales to buyers within Canada)

(Dealers who buy your product)	Wholesale Branches\$\$
(Including chain stores and all) storekeepers who buy your product	Retail Branches\$
Consumers ~	Industrial Consumers\$ (These are factories, mines, contractors, railroads, utilities, institutions and all users of your product except house-holders\$ (These are individuals who buy at retail for personal use, sometimes called home consumers, domestic consumers, ultimate consumers, etc.)
Export sales (sales made to buyers outs Total sales of goods	\$\$\$\$\$\$\$\$

Explanation of Terms.—As the questionnaires for distribution of sales were mailed to manufacturers listed in the Census of Industry the classification of industries used in this report is the same as that employed for the census of manufactures. As it was not possible to secure reports from all manufacturing establishments the percentage distribution of sales is based on the returns of reporting firms, while the gross value of production shown for each industry is taken from the report "The Manufacturing Industries of Canada, 1930."

Sales to Manufacturers' Wholesale Branches.—For this study an effort has been made to include under this head only the value of goods which were actually handled at the manufacturers' wholesale branches as distinct from sales and orders secured by branch offices but actually shipped from the factory directly to the purchaser. In other words, only the sales made to branches which perform the regular functions of a wholesaler were to be reported as sales to manufacturers' wholesale branches.

Sales to Other Wholesalers.—Under this heading the sales to dealers who purchase for resule to other wholesalers, retailers or industrial consumers are reported. Included in this classification are sales to wholesale merchants, jobbers, exporters, and wholesale machinery and supply houses.

Sales to Manufacturers' Retail Branches.—This classification covers the sales through retail outlets owned by manufacturing concerns.

Sales to Other Retailers.—Under this heading are shown the sales to retail stores of all kinds (except manufacturers' retail branches), including department stores, chain store companies and mail order houses as well as independent retailers.

. Sales to Industrial and Other Large Consumers.—This classification is considered to include sales to factories, mines, contractors, railroads, utilities, institutions and all users of manufactured products except householders.

Sales to Household Consumers.—The sales under this heading are those made by manufacturers directly to individuals for personal or domestic use. In addition to sales at the plant, mail order and house-to-house selling by manufacturers are included under this heading.

Export Sales.—Under this heading are shown the sales made by the manufacturing plants to buyers outside of Canada. The value of goods sold to wholesalers in Canada and then exported would not be included under this heading.

Analysis of Results

Although questionnaires were sent to all manufacturing establishments included in the Census of Industry, distribution of sales figures were not compiled for the industries listed below. In general, details for these industries have been omitted because the establishments are engaged chiefly in repair or service operations or because their products are sold directly to users.

INDUSTRIES NOT INCLUDED IN ANALYSIS

	Gross Value of
	Production, 1930
Textiles and Textile Products Group	\$
•	
Dyeing, cleaning and laundry work	25,472,664
Wood and Paper Products Group

Central Electric Stations	126,038,145
Total, Industries Omitted	402,506,646

The gross value of production for all manufacturing plants in Canada, according to the reports for the Census of Industry, was \$3,428,970,628 in 1930. Deducting the gross value of production for industries for which no distribution of sales is shown, the gross value of production of industries covered in this report was \$3,026,463,982 in 1930.

Gross value of production, all manufacturing industries, 1930.\$3,428,970,628
Gross value of production of industries omitted 402,506,646
Gross value of production for manufacturing industries for
which distribution of sales is shown

Distribution of Sales.—The total sales of all manufacturing plants in Canada, based on the returns of reporting firms, were distributed in the following manner: 30.5 per cent to wholesale houses, either manufacturers' sales branches or other wholesalers; 26.6 per cent to retailers, either manufacturers' retail branches or other retailers; 25.5 per cent to industrial and other large consumers; 4.6 per cent direct to householders; and 12.8 per cent to other countries.

The summary figures for all industries, however, conceal the wide variations in the use of the different channels of distribution by individual industries. To some extent the distribution of the sales of manufacturers is determined by the nature of the product. Thus the sales of bag factories are made largely to industrial consumers, while the sales of manufacturers of coffins and caskets are largely to undertakers and funeral parlours. In another field we find the greater part of the output of the bread and other bakery products industry going directly to household consumers although a substantial part is also distributed through retail stores.

In most cases, however, the distribution of the sales of manufacturers is determined largely by the structure of wholesale and retail trade and the effectiveness of different systems of merchandising. Prior to the development of large-scale merchandising organizations the customary system of distribution, particularly for consumers' goods, was manufacturer-wholesaler-retailer. This system has now become greatly modified with the establishment of wholesale and retail outlets by manufacturers and the increasing extent to which retailers buy directly from manufacturers. The modifications which have taken place in the three-party system of distribution, manufacturer-wholesaler-retailer, cannot be measured by the information available, but the tables which follow give a fairly clear indication of the situation in the year 1930. It should, of course, be borne in mind that, as the figures relate to Canadian manufactures only, the distribution of imported merchandise is not covered.

In order to illustrate the varying reliance which is placed upon different channels of distribution by different industries, reference may be made to the figures for some of the leading industries in Canada.

The wholesaler remains as an essential distributive agency for a number of important industries, among which are sugar refineries, the tobacco, cigars and cigarettes industry, and the fruit and vegetable preparations industry. Manufacturers of sugar reported that almost 80 per cent of their sales was made to wholesale establishments and less than 7 per cent to retailers. Sales to industrial and other large consumers formed 12 per cent of the total, and export sales, 1.7 per cent. Tobacco manufacturers made 70 per cent of their sales to wholesalers and almost 30 per cent directly to retailers. Direct purchases by retailers from the fruit and vegetable preparations industry formed more than 30 per cent of the total sales reported, while sales through wholesalers constituted 63.4 per cent based on 0.4 per cent through manufacturers' wholesale branches and 63.0 per cent to other wholesalers.

The distribution of sales by manufacturers of clothing and apparel illustrates the tendency towards direct purchasing by retailers. Less than 7 per cent of the sales of men's clothing factories was made through wholesalers, while 15·3 per cent was made through manufacturers' retail branches and 75·0 per cent to other retailers. The proportions for manufacturers of women's clothing show the same emphasis on direct selling as 8·4 per cent was made through wholesale establishments, including manufacturers' wholesale branches, and 87·2 per cent to retailers, including manufacturers' retail branches. Boot and shoe factories reported 25·2 per cent of their sales to wholesalers and 73·1 per cent to retailers, including manufacturers' retail branches.

Manufacturers' wholesale branches are important primary distributive agencies for several industries. Such branches, of course, sell to retailers but also deal, to a fairly large extent, with other wholesale establishments. The extent to which the wholesale merchant is replaced by the manufacturers' sales branch is not, therefore, indicated by the proportion of the sales shown for manufacturers' branches. In the biscuits, confectionery and cocoa industry manufacturers' wholesale branches were credited with 22-4 per cent of the sales, compared with 25-7 per cent for other wholesalers, 6-1 per cent for manufacturers' retail branches, and 40-9 per cent for other retailers. Manufacturers of rubber goods, including footwear, reported 23-5 per cent of their sales through their own wholesale branches and only 9-5 per cent to other wholesalers. Firms in the slaughtering and meat packing industry made 36-6 per cent of their sales through their own branches, 4-4 per cent to other wholesalers, 3-6 per cent through their own retail branches, and 48-8 per cent directly to other retailers.

Manufacturers of agricultural implements reported $42 \cdot 3$ per cent of their sales through their own wholesale branches and $5 \cdot 3$ per cent to other wholesalers. In the electrical apparatus and supplies industry $29 \cdot 5$ per cent of the sales was made through manufacturers' wholesale branches and $27 \cdot 6$ per cent to other wholesalers.

SECTION V

DISTRIBUTION DES VENTES DES ÉTABLISSEMENTS MANUFACTURIERS, CANADA, 1930

DISTRIBUTION DES VENTES DES ÉTABLISSEMENTS MANUFACTURIERS, 1930

Introduction.—Cette section donne les résultats d'un étude mitiale des canaux de distribution des établissements manufacturiers au Canada durant l'année 1930. Les statistiques présentées dans ce rapport ne se rapportent qu'au premier stage de distribution de la manufacture et n'indiquent pas nécessairement la destination ultime des produits. Ce rapport n'inclut que les ventes des manufacturiers. Les renseignements sur les ventes des établissements de gros ou de détail paraissent dans les rapports sur ces genres de commerce.

Cadre de l'enquête.—Lors du Recensement des Etablissements de Commerce et de Service en 1931, des questionnaires sur lesquels la distribution des ventes devait être indiquée ont été distribués à tous les manufacturiers inclus dans le recensement de l'industrie. Bien que chaque firme manufacturière au Canada n'ait pas cru possible de fournir des renseignements sur la distribution de ses ventes, un nombre suffisant de manufacturiers ont fait rapport dans chaque industrie pour permettre d'établir des chiffres estimatifs. Dans le cas des petites industries, des rapports ont été reçus de tous les établissements manufacturiers

Nature de l'enquête.—Le questionnaire employé pour l'enquête contenait la formule suivante pour la distribution des ventes—

VENTES:-

Dans l'espace réservé à cette fin, inscrire la valeur à la manufacture de tous les produits de votre manufacture vendus par votre établissement, au cours de l'année couverte par le présent rapport, à chacun des divers chents énumérés. Ne faire rapport que des ventes proprement dites.

Ne pas faire rapport des opérations de réparation et de service m de la valeur du travail effectué sur les matières fournies aux autres.

Ventes domestiques (Ventes au Canada)

, 02002 202	donordado (, entrep per d'anna,
Détaillants— (Y compris magasins en chaîne et autres détaillants achetant vos produits pour vendre directement aux consommateurs)	vous)
Consommateurs— (Utilisant actuellement vos produits.)	Consommateurs industriels
Ventes à l'Atranger (aux acheteurs en del	nors du Canada)\$\$\$\$

Explication des termes.—Comme les questionnaires sur la distribution des ventes ont été adressés aux manufacturiers énumérés dans le recensement industriel, la classification des industries suivie dans ce rapport est la même que celle adoptée pour le recensement des manufactures. Comme il était impossible d'obtenir un rapport de tous les établissements manufacturiers, le pourcentage de distribution des ventes est basé sur les rapports des firmes qui ont répondu, tandis que la valeur brute de la production indiquée pour chaque industrie est tirée du rapport intitulé "Industries manufacturières du Canada, 1930."

Ventes aux succursales de gros des manufacturiers.—Dans cette étude, on s'est efforcé de n'inclure sous ce titre que la valeur des marchandises réellement mises en vente dans les succursales de gros des manufacturiers à l'exclusion des ventes et des commandes au compte des succursales, mais réellement expédiées directement de la fabrique à l'acheteur. En d'autres termes, seules les ventes faites aux succursales remplissant les fonctions régulières d'une maison de gros devaient être comprises comme ventes faites aux succursales de gros des manufactures.

Ventes aux autres maisons de gros.—Sous ce titre, les ventes aux commerçants qui achètent pour revendre à d'autres maisons de gros, de détail ou consommateurs industriels sont indiquées. Incluses dans cette classification sont les ventes aux marchands de gros, courtiers, exportateurs et maisons de gros de machinerie et d'approvisionnements.

Ventes aux succursales de détail des manufacturiers.—Cette classification comprend les ventes faites par l'entremise des maisons de détail que possèdent les firmes manufacturières.

Ventes à d'autres détaillants.—Sous ce titre sont indiquées les ventes aux magasins de détail de toutes sortes (excepté les succursales de détail des manufacturiers), y compris les magasins à rayons, les compagnies de magasins en chaîne, les comptoirs postaux et les détaillants indépendants.

Ventes aux industriels et autres gros consommateurs.—Cette section doit inclure les ventes faites aux fabriques, mines, entrepreneurs, chemins de fer, services publics, institutions et tous autres gros consommateurs de produits manufacturiers, sauf les consommateurs demestiques.

Ventes aux consommateurs domestiques.— Les ventes sous ce titre sont celles que les manufacturiers font directement aux individus pour usage personnel ou ménager. Outre les ventes à la manufacture, les ventes par la poste ou de porte en porte par les manufacturiers sont inscrites sous ce titre.

Ventes à l'étranger.—Cette section inclut les ventes que les établissements manufacturiers font en dehors du Canada. La valeur des marchandises vendues aux marchands de gros au Canada et exportées ensuite ne serait pas incluse ici.

Analyse des résultats

Bien que des questionnaires aient été envoyés à tous les établissements manufacturiers inclus dans le recensement de l'industrie, la distribution des ventes n'a pas été compilée pour les industries mentionnées ci-dessous. En général, les détails sur ces industries ont été omis parce que les établissements s'occupent surtout de réparations ou de services, ou parce que leurs produits sont vendus directement aux consommateurs.

INDUSTRIES NON COMPRISES DANS L'ANALYSE

·	Valeur brute

Total, industries omises.	. 402,506,646

La valeur brute de la production de tous les établissements manufacturiers au Canada, d'après les rapports du recensement des industries, était de \$3,428,970,628 en 1930. Si l'on déduit la valeur brute de la production des industries pour lesquelles aucune distribution de ventes n'est indiquée, la valeur brute de la production des industries mentionnées dans ce rapport est de \$3,026,463,982 pour 1930.

Valeur brute de la production des industries manufacturières pour lesquelles la distribution des ventes est indiquée. \$3,026,463,982

Distribution des ventes.—Les ventes totales de tous les établissements manufacturiers du Canada, basées sur les rapports des firmes qui ont répondu, se répartissent comme suit: maisons de gros, succursales de ventes des manufacturiers ou autres marchands de gros, 30-5 p.c.; détaillants, succursales de détail des manufacturiers ou autres détaillants, 26-6 p.c.; consommateurs industriels et autres gros consommateurs, 25-5 p.c.; directement aux consommateurs ménagers, 4-6 p.c.; pays étrangers, 12-8 p.c.

Les chiffres du sommaire pour toutes les industries, toutefois, n'indiquent pas les grandes variations dans l'emploi des différents canaux de distribution par les industries individuelles. Jusqu'à un certain point, la distribution des ventes des manufacturiers dépend de la nature du produit. Par exemple, les ventes des fabriques de sacs vont généralement aux consommateurs industriels, tandis que les ventes des manufacturiers de cercueils et de bières vont généralement aux entrepreneurs de pompes funèbres et aux salons funéraires. Dans une autre sphère, nous voyons que la plus grande partie du pain et autres produits de la boulangerie va directement aux consommateurs ménagers bien qu'une partie assez grande soit aussi distribuée par l'entremise des magasins de détail.

Dans la plupart des cas, cependant, la distribution des ventes des manufacturiers est surtout sujette à la structure du commerce de gros et de détail et à l'efficacité des différents systèmes de mise sur le marché. Avant l'arrivée des organisations commerciales opérant sur une vaste échelle, le système coutumier de distribution, particulièrement pour les denrées ménagères, était du manufacturier au marchand de gros et ensuite au marchand de détail. Ce système est maintenant grandement modifié avec l'établissement du commerce de gros et de détail par les manufacturiers et aussi parce qu'un nombre de plus en plus grand de détaillants achètent directement des manufacturiers. Les modifications qui se sont produites dans le système tripartite de distribution—le manufacturier, le marchand de gros et le détaillant—ne peuvent être établies d'après

les renseignements connus, mais les tableaux qui suivent donnent une idée assez claire de la situation en 1930. Il faut se rappeler, naturellement, que les chiffres ne touchent que les industries canadiennes et que, par conséquent, la distribution des marchandises importées n'est pas incluse.

Pour illustrer les variations dans l'exactitude absolue des renseignements concernant les différents canaux de distribution des diverses industries, il faudrait référer aux chiffres de quelquesunes des principales industries du pays.

Le marchand de gros est encore l'agence essentielle de distribution pour un certain nombre d'industries importantes, parmi lesquelles se trouvent les industries du sucre, des tabacs, cigares et cigarettes, et des préparations de fruits et de légumes. Les fabricants de sucre ont déclaré qu'environ 80 p.c. de leurs ventes vont aux établissements de gros et moins de 7 p.c. aux détailants. Les ventes aux industriels et autres gros consommateurs forment 12 p.c. du total, et les ventes d'exportation, 1.7 p.c. Pour ce qui est des manufacturiers de tabacs, 70 p.c. de leurs ventes sont allées aux marchands de gros et presque 30 p.c. directement aux détaillants. Les achats directs des détaillants de l'industrie des préparations de fruits et de légumes représentent plus des 30 p.c. des ventes totales mentionnées, tandis que les ventes par l'entremise des marchands de gros représentaient 63.4 p.c., soit 0.4 p.c. par l'entremise des succursales de gros des manufacturiers et 63.0 p.c. par l'entremise des autres maisons de gros.

La distribution des ventes des manufacturiers de vêtements donne une idée de la tendance vers les achats directs par les détaillants. Moins de 7 p.c. des ventes des fabriques de confection pour hommes sont passées par les maisons de gros, tandis que 15·3 p.c. sont passées par les succursales de détail des manufacturiers et 75·0 p.c. par les autres détaillants. Les proportions pour les fabricants de confection pour femmes indiquent la même tendance vers l'achat direct, car 8·4 p.c. des ventes sont passées par les maisons de gros, y compris les succursales de gros des manufacturiers, et 87·2 p.c. par les détaillants, y compris les succursales de détail des manufacturiers. Les fabriques de chaussures font rapport que 25·2 p.c. de leurs ventes vont aux marchands de gros et 73·1 p.c. aux détaillants, y compris les succursales de détail des manufacturiers.

Les succursales de gros des manufacturiers sont des agences très importantes de distribution pour plusieurs industries. Ces succursales, naturellement, vendent aux détaillants, mais dans une large mesure font affaires avec d'autres établissements de gros. La proportion des ventes des succursales de manufacturier n'indique pas, par conséquent, jusqu'à quel point ces succursales remplacent le marchand de gros. Dans l'industrie des biscuits, confiscrie et cacao, les succursales de gros des manufacturiers absorbent 22·4 p.c. des ventes contre 26·7 p.c. pour les autres maisons de gros, 6·1 p.c. pour les succursales de détail des manufacturiers et 40·9 p.c. pour les autres détaillants. Les fabricants d'articles en caoutchoue, y compris les chaussures, ont fait rapport que 23·5 p.c. de leurs ventes se font par l'entremise de leurs succursales de gros et 9·5 p.c. seulement par l'entremise des autres maisons de gros. Les compagnies exploitant des abattoirs et salaisons créditent 36·6 p.c. de leurs ventes à leurs propres succursales, 4·4 p.c. aux autres maisons de gros, 3·6 p.c. à leurs propres succursales de détail et 48·8 p.c. aux autres détaillants.

Les fabricants d'instruments aratoires font rapport que 42·3 p.c. de leurs ventes se font par l'entremise de leurs propres succursales de gros et 5·3 p.c. par l'entremise des autres marchands de gros. L'industrie des appareils et fournitures électriques déclare que 29·5 p.c. de ses ventes se font par l'entremise des succursales de gros des manufacturiers et 27·6 p.c. par l'entremise des autres maisons de gros.

APPENDIX WHOLESALE CENSUS SCHEDULES

APPENDICE

FORMULES DE RECENSEMENT DU COMMERCE DE GROS

TYPES OF WHOLESALE CENSUS SCHEDULES

Because of the necessity of economizing in space not all the schedules employed in the canvass of wholesale establishments are reprinted in this volume. The form on which enumerators of population and agriculture entered the names, addresses and certain other elementary facts regarding each wholesale establishment found operating in their respective enumeration areas will be found in Appendix II of Volume I of the Report of the Census of Canada, 1931.

In the collection of information by mail from wholesale establishments three schedules were used to secure the general particulars required. These schedules were adapted, as far as possible, to the scale and nature of the business carried on. The following is a list of the three schedules used:

Wholesale Schedule No. 1—For all wholesale establishments except those dealing in food

Wholesale Schedule No. 2-For wholesale dealers in food products.

Wholesale Schedule No. 3—For those wholesale firms which found it impossible to fill in the more detailed forms.

Wholesale Schedule No. 1 is printed in full in this volume. Schedule No. 2 was similar to Schedule No. 1 except for the section on sales by commodity classes. This section only is printed here. Schedule No. 3 (not printed here) was similar to Schedules 1 and 2 except that the breakdown of sales by commodity classes was omitted.

TYPES DE FORMULES DE RECENSEMENT DU COMMERCE DE GROS

Vu la nécessité d'économiser l'espace, toutes les formules employées dans le recensement des établissements de gros ne sont pas reproduites dans ce volume. On trouvera à l'appendice II du Volume I du Rapport du Recensement du Canada, 1931, la formule sur laquelle les énumérateurs de la population et de l'agriculture ont inscrit les noms, les adresses et certains autres faits élémentaires concernant chaque établissement de gros qu'ils ont trouvé dans leurs districts respectifs d'énumération.

Pour obtenir par la poste les renseignements des établissements de gros, on a employé trois questionnaires requérant les détails généraux désirés. Ces questionnaires ont été adaptés, autant que possible, à l'échelle et à la nature du commerce poursuivi. Voici la liste des trois questionnaires employés:

- Questionnaire du commerce de gros N^o 1—Pour tous les établissements de gros, sauf ceux qui font le commerce de denrées alimentaires.
- Questionnaire du commerce de gros N° 2—Pour les commerçants de gros en produits alimentaires.
- Questionnaire du commerce de gros N° 3—Pour les maisons de gros qui se sont trouvées dans l'impossibilité de rempler les formules plus détaillées.

Le questionnaire N° 1 de gros est reproduit dans ce volume. Le N° 2 était semblable au N° 1, sauf pour la section des ventes réparties par denrées. Seule cette section est reproduite ici. Le N° 3 (non reproduit ici) est semblable aux $N^{\circ s}$ 1 et 2, sauf que la répartition des ventes par catégories de denrées est omise.

DOMINION BUREAU OF STATISTICS, CANADA

CENSUS OF MERCHANDISING AND SERVICE ESTABLISHMENTS, 1931

WHOLESALE SCHEDULE No. 1 (GENERAL)

The Census of Merchandising and Scrvice Establishments is taken in conformity with the requirements of the Statistics Act, 8.9 George V, Chaptor 43.
Act, 8-9 George V, Chaptor 43. All answers to the enquiries on this schedule will be treated as absolutely confidential. No publication will be made by the Dominion Bureau of Statistics which will disclose the name or operations of individual establishments in any particular. The examination and tabulation of returns will be made by officers and clerks sworn to secreey. Information supplied will not be used as a basis of any system of taxation, or disclosed to any municipal or provincial authority or to any other department of the Dominion Government. It will be used only in the preparation of statistics. All answers should refare to the calendar year 1930, or to the business year most nearly conforming to the calendar year. Reports should, if possible, cover the full year's operation even if ownership has changed Establishments which own and operate branch stores (such as chain organizations) must prepare separate reports for each store.
T TANCOUTERIAN OF FEMARY POTATIONS
I. DESCRIPTION OF ESTABLISHMENT: (a) Name of Establishment. (b) Name of Owner. (c) Location of Establishment.—Province (In Prairie Provinces) Give Township. Range Meridian. City, Town, Village or Parish. Street Address of Head Office. (d) Is establishment located within corporate limits of city, village, or incorporated place? (Yes or No). BUREAU FÉDÉRAL DE LA STATISTIQUE, CANADA

RECENSEMENT DES ÉTABLISSEMENTS DE COMMERCE ET DE SERVICE, 1931

QUESTIONNAIRE DU COMMERCE DE GROS N°1 (GÉNÉRAL)

Le recensement des établissements de commerce et de service est fait conformément aux dispositions de la Lei de la Statistique, 8-9 George V, chapatre 43.

Tous des réponses aux questions posées sur la présente formule seront considérées comme absolument contidentielles, Aux publication ne sera faite pur le Bureau Fédéral de la Statistique de nature à faire connsitre le nom et le genre de commerce d'un établissement ou l'utire en particulier. L'examence it a mise entablesur des rapports seront futs par des commis assermentés et teaus au secret. Les reaseignements fourns ne serviront en aucune façon à la fixation de taxes et ne seront communiqués à aucune autorité provincate ou municipale ou à aucun autre ministère ou département du Couvernement édéral; ils ne serviront qu'à la préparation de statistiques.

Toutes les réponses doivent se rapporter à l'année civile 1930, ou à l'année commercialo la plus conforme à l'année civile. Si la chose est possible, les rapports devront couvrir les opérations entières de l'année, même si l'établissement a changé de propriétaire. Les établissements qui possèdent et exploitent des succursales (telles les chaînes de magasius) sont tenus de préparer des rapports distincts pour chaque succursale. des rapports distincts pour chaque succursale.

I. DESCRIPTION DES ÉTABLISSEMENTS:—

(a) Nom de l'établissement.

(b) Nom du propriétaire

(c) Emplacement—Province.

(Dans les Provinces des Prairies) donnez le Township.
